Mechanisms of Lymphocyte Activation and Immune Regulation VI Sudhir Gupta, J. John Cohen, 2013-06-29 Since programmed cell death was first described in insects in 1964 and apoptosis was described in 1972 rapid progress has been made in understanding the basic mechanisms and genes regulating programmed cell death and apoptosis In addition defects in various genes regulating programmed cell death have been delineated in several experimental models of human diseases This volume surveys various aspects of these rapidly developing areas of research in programmed cell death apoptosis This volume should be of interest to basic immunologists and molecular biologists The volume begins with a historical perspective of cell death The remainder of the volume is divided into four different parts Part I deals with the signaling pathways in apoptosis including cell cycle control of apoptosis role of ceramide in apoptosis role of antibody signaling and biochemical regulation of apoptosis The mechanisms for recognition of apoptotic lymphocytes by macrophages are also reviewed Part II examines the role of various genes that regulate apoptosis including the role of Fas FasL and other TNF family members in apoptosis and homeostatic regulation of immune response Recently described splice variants and their influence on apoptosis are also reviewed and the role of the members of the Bcl 2 family in apoptosis is discussed in detail Part III reviews various aspects of apoptosis in B lymphocytes including mechanisms that regulate apoptosis survival of B lymphocytes and the regulation of Fas mediated apoptosis in B lymphocytes **Biomedical Index to PHS-supported Research**, 1991

experimental observations that form the basis for the science of immunology at the molecular cellular and whole organism levels and draw the appropriate conclusions Includes summary boxes that assist with rapid review and mastery of key material Evolve Instructor site with an image and test bank is available to instructors through their Elsevier sales rep or via request at <https://evolve.elsevier.com> **Basic and Clinical Immunology E-Book** Mark Peakman, Diego

Vergani, 2009-04-24 Within this one volume both basic science and clinical immunology are demystified for the medical and other health sciences student The basic immunological processes are described first with a level of detail restricted to what is appropriate for medical and similar curricula In the second part of the book immunological mechanisms behind major diseases of the various body systems are explained Throughout the text clinical details are highlighted and more in depth material is differentiated from the main text Covers both basic science and clinical immunology in one volume Specifically aimed at medical students and appropriate for integrated system based curricula Main text supported by in depth key point and clinical boxes Now full colour throughout Specialised material removed and replaced with clearer introductory explanations Clearer illustrations thanks to rewritten captions

Molecular Dynamics at the Immunological Synapse

Pedro Roda-Navarro, Andrés Alcover, Vincenzo Di Bartolo, 2017-03-21 The immunological synapse IS is a specialised cell cell adhesion that mediates antigen acquisition and regulates the activation of lymphocytes Initial studies of the IS showed a structure composed of stable supra molecular activation clusters SMAC organised during the interaction of helper T lymphocytes with B lymphocytes working as antigen presenting cells A central SMAC of coalesced T cell receptors TCRs and a peripheral SMAC for cell cell adhesion were observed IS with similar structure was later described during antigen acquisition by B cells and during the interaction of NK cells with target and healthy cells More recent research developed with microscopy systems that improve the spatial and temporal resolution has showed the complex molecular dynamics at the IS that governs lymphocyte activation Currently the IS is seen as a three dimensional structure where signalling networks for lymphocyte activation and endosomal and cytoskeleton machinery are polarised A view has emerged in which dynamic microclusters of signalling complexes are composed of molecular components attached to the plasma membrane and other components conveyed on sub synaptic vesicles transported to the membrane by cytoskeletal fibers and motor proteins Much information is nonetheless missing about how the dynamics of the endosomal compartment the cytoskeleton and signalling complexes are reciprocally regulated to achieve the function of lymphocytes Experimental evidence also suggests that the environment surrounding lymphocytes exposed to different antigenic challenge regulates IS assembly and functional output making an even more complex scenario still far from being completely understood Also although some signalling molecular components for lymphocyte activation have been identified and thoroughly studied the function of other molecules has not been yet uncovered or deeply characterised This research topic aims to provide the reader with the latest information about the molecular dynamics governing lymphocyte activation These molecular dynamics dictate cell decisions

Thus we expect that understanding them will provide new avenues for cell manipulation in therapies to treat different immune related pathologies

Mechanisms of Lymphocyte Activation and Immune Regulation Sudhir Gupta, William E. Paul, Anthony Fauci, 2013-11-11 During the past 5 years rapid progress has been made in the understanding of biochemical pathways for signal transduction in lymphocyte activation Gene cloning technology has been instrumental in defining and making available in pure form of a number of growth and differentiation factors in the characterization of their receptors and in the delineation of genes for the T cell receptor This book is divided into 6 sections Section 1 deals with the molecular structure of the T cell receptor Section 2 discusses the role of the T cell receptor membrane ion channels and biochemical pathways of signal transduction in T cell activation The molecular structures and biological and immunological effects of interleukin 1 interleukin 2 and interleukin 3 are presented in Section 3 This section also details the structure of interleukin 2 receptor and its use as a target for therapy for certain leukemias Section 4 includes the biochemical events which occur following the delivery of the signal for B cell activation proliferation and differentiation by antigen growth differentiation factors The molecular structure of B cell stimulating factors is also discussed The role of oncogene expression in cellular activation and differentiation is included in Section 5 The cellular and molecular basis of natural killing and the molecular basis of cyclosporin A mediated immunosuppression are discussed in detail in Section 6 We hope this book will serve as a reference work on basic mechanisms of lymphocyte activation proliferation and differentiation for immunologists and molecular biologists

Mechanisms of Lymphocyte Activation and Immune Regulation II S. Gupta, 2013-06-29 The activation of lymphocytes by physiologic ligands has become a central area of study for immunologists Furthermore lymphocytes offer many advantages for the study of general aspects of receptor mediated cellular activation For these reasons research on the cellular and molecular aspects of the activation of lymphocytes by antigens antigen analogues lymphokines and other growth factors has expanded enormously in the last several years A series of conferences The International Conferences on Lymphocyte Activation has been initiated to meet the growing need for a forum for the discussion of the topics that are included within the area of lymphocyte activation This volume represents the proceedings of the Second International Conference on Lymphocyte Activation and Immune Regulation held on February 18-20 1988 at Newport Beach California The proceedings comprise four major sections The first deals with the T cell receptors and T cell activation It includes a model for the T cell receptor interaction with a complex of MHC plus antigen structure of γ c δ T cell receptor and their distinct isotypic forms the role of zeta chain in the expression and structure of T cell receptors and its role in transmembrane signalling The use of somatic cell mutants in the study of signal transduction function of the T cell antigen receptors and the early and late steps of signal transduction via a T cell antigen receptors are discussed

Protein Kinases in Blood Cell Function Chi-Kuang Huang, Ramadan Sha'afi, 1993-02-22 Protein Kinases in Blood Cell Function provides an up to date comprehensive review of protein kinases in various types of blood cell function Blood cells discussed include T lymphocytes B lymphocytes platelets

mast cells neutrophils and macrophages The book will interest pathologists physiologists oncologists hematologists leukocyte biologists and immunologists It will also benefit anyone interested in signal transduction and blood cell functions such as host defense hemostasis and immune response

Cancer Immunology and Immunotherapy Glenn Dranoff,2011-04-11 The interplay between tumors and their immunologic microenvironment is complex difficult to decipher but its understanding is of seminal importance for the development of novel prognostic markers and therapeutic strategies The present review discusses tumor immune interactions in several human cancers that illustrate various aspects of this complexity and proposes an integrated scheme of the impact of local immune reactions on clinical outcome Current active immunotherapy trials have shown durable tumor regressions in a fraction of patients However clinical efficacy of current vaccines is limited possibly because tumors skew the immune system by means of myeloid derived suppressor cells inflammatory type 2 T cells and regulatory T cells Tregs all of which prevent the generation of effector cells To improve the clinical efficacy of cancer vaccines in patients with metastatic disease we need to design novel and improved strategies that can boost adaptive immunity to cancer help overcome Tregs and allow the breakdown of the immunosuppressive tumor microenvironment
