Dimensional Analysis and Similarity in Fluid Mechanics Nord-Eddine Sad Chemloul, 2020-11-02. Dimensional analysis is the basis for the determination of laws that allow the experimental results obtained on a model to be transposed to the fluid system at full scale or a prototype. The similarity in fluid mechanics then allows for better redefinition of the analysis by removing dimensionless elements. This book deals with these two tools with a focus on the Rayleigh method and the Vaschy Buckingham method. It deals with the homogeneity of the equations and the conversion between the systems of units SI and CGS and presents the dimensional analysis approach before addressing the similarity of flows. Dimensional Analysis and Similarity in Fluid Mechanics proposes a scale model and presents numerous exercises combining these two methods. It is accessible to students from their first year of a bachelor's degree.
