Nicols Fox, 2013-04-15 From the cars we drive to the instant messages we receive from debate about genetically modified foods to astonishing strides in cloning robotics and nanotechnology it would be hard to deny technology's powerful grip on our lives To stop and ask whether this digitized implanted reality is quite what we had in mind when we opted for progress or to ask if we might not be creating more problems than we solve is likely to peg us as hopelessly backward or suspiciously eccentric Yet not only questioning but challenging technology turns out to have a long and noble history In this timely and incisive work Nicols Fox examines contemporary resistance to technology and places it in a surprising historical context She brilliantly illuminates the rich but oftentimes unrecognized literary and philosophical tradition that has existed for nearly two centuries since the first Luddites the machine breaking followers of the mythical Ned Ludd lifted their sledgehammers in protest against the Industrial Revolution Tracing that current of thought through some of the great minds of the 19th and 20th centuries William Blake Mary Shelley Charles Dickens John Ruskin William Morris Henry David Thoreau Ralph Waldo Emerson Robert Graves Aldo Leopold Rachel Carson and many others Fox demonstrates that modern protests against consumptive lifestyles and misgivings about the relentless march of mechanization are part of a fascinating hidden history She shows as well that the Luddite tradition can yield important insights into how we might reshape both technology and modern life so that human community and environmental values take precedence over the demands of the machine In *Against the Machine* Nicols Fox writes with compelling immediacy bringing a new dimension and depth to the debate over what technology means both now and for our future **Artificial Intelligence and Machine Learning in the Travel**

Villages, Women, and the Success of Dairy Cooperatives in India Pratyusha Basu,2009 India s cooperative dairying program is widely celebrated as an example of successful rural development yet the meanings of this success have been understood mainly through the pronouncements of national and international development agencies Within such official narratives there has been relatively little engagement with the geographies of dairy development both its place specific productions through political contests availabilities of labor and distributions of agricultural resources and the unevenness of its outcomes across rural India This absence is even more surprising given that village level cooperatives comprise the foundation of India s dairy development program and the work of women within rural households is continuously invoked as an integral part of the dairy work This book extends and enriches current understandings of cooperative dairying in India to show both its value to rural communities as well as the limitations of its participatory structures Combining comparative and ethnographic approaches explanations for the diverse outcomes of cooperative dairying are provided from the perspective of the people and places directly involved in the everyday reproductions of rural development This book contributes to existing understandings of rural development and rural geographies in four significant ways First by following histories of development from their local origins to their national and international appearances the global genealogies that are usually

attached to development are rendered more complex Second by connecting cooperatives to place the ways in which participation in development reflects local struggles for power and hence are structured through local inequalities is revealed Third by linking dairying and agriculture the continuing importance of resource distributions in shaping the outcomes of rural development is highlighted Finally the crucial role of household divisions of labor in the success of village dairy cooperatives is explicated through showing how struggles over the meanings of rural women s work become key to enabling household level participation in dairying This book will be of interest to scholars in a wide range of disciplinary and interdisciplinary fields including geography sociology anthropology rural studies development studies gender studies and regional studies of India *The Painter and Decorator* ,1928 [The Sculpture Machine](#) Michael Anton Budd,1997-03
