The Macroeconomics of Developing Countries Giovanni Andrea Cornia, 2020-03-26 The Macroeconomics of Developing Countries provides a comprehensive discussion of the exogenous factors and macroeconomic policies that affect the business cycle long term growth and distribution of income in developing countries It examines countries dependent on natural resources and affected by supply rigidities in agriculture They also feature dualistic markets a large informal sector rapid population growth a vulnerable export sector and chronic dependence on a volatile global finance The Macroeconomics of Developing Countries uses these examples to analyse the impact of stabilization and adjustment politics on growth inequality and poverty Despite the launch of the Sustainable Development Goals there is little consensus on how macroeconomic policies can be consistent with these objectives The Macroeconomics of Developing Countries demonstrates that a critical application of standard models to developing countries can generate erroneous results and induce the adoption of incorrect policy In order to address this it discusses the key structural differences between advanced and developing countries in order to justify the construction of alternative models

Project Appraisal and Macroeconomic Policy T. van der Burg, 2012-12-06 Environmental economics addresses the issues that arise on the boundaries between economic systems and natural systems such as pollution and natural resource depletion and degradation Like any other branch of applied economics it has drawn its tools and techniques from the wide range already available in economics generally selecting adapting and extending these to meet its own particular requirements in its own particular context Here as elsewhere in economics public policy analysis requires quantitative assessments of the economic impact of different policy choices Perhaps the most distinctive contribution of environmental economics has been the development of techniques for the economic valuation of environmental goods and services in the absence of markets for such goods and services or in the presence of markets that are at best imperfect or incomplete Nevertheless policy analysis still relies on one or another of three broad groups of methods used in economics generally One is project appraisal which at the micro level provides an evaluation of the costs and benefits of investment options to inform the choice among them while at the macro level policy analysis rests either on computable general equilibrium CGE models or on economy wide macroeconometric models All models are simplifications designed to focus attention on the important features of the problem at hand and neglecting other features that might for a different problem assume greater importance

Rethinking Macroeconomics for Sustainability Alejandro Nadal, 2011-01-13 Macroeconomic policies have

devastating effects on the environment They shape the economic processes that drive deforestation soil erosion the exhaustion of living marine resources greenhouse gas emissions and the massive loss of biodiversity Despite this the vital connection between macroeconomic policies and the environment has thus far received little attention by the academic and the policy making communities Rethinking Macroeconomics for Sustainability reveals the linkages between monetary financial and fiscal policies and the environmental degradation that threatens the planet s biosphere In doing so it examines the complex lines of transmission from policy priorities all the way down to the effects at the local level as well as analyzing the deep seated relationship between macroeconomic policy models and their impacts on growth peoples livelihoods and the environment Besides exploring the relation between macroeconomic and climate change policies as well as efforts to green the world economy the book considers five key case studies in Latin American economies Going beyond this it also sets out specific policy recommendations both at the national and international levels All this is based on the incontrovertible premise that macroeconomic policies must to be redesigned in order to attain long term sustainability objectives and that monetary and fiscal policies are as important for environmental stewardship as they are for growth and prosperity
