Mad Cows:

Mad Cows and Mother's Milk, Second Edition William Leiss, Douglas Alan Powell, 2004 The first case study deals with the mad cow fiasco of 1996 one of the most expensive and tragic examples of poor risk management in the last twenty five years For ten years the British government failed to acknowledge the possibility of a link between mad cow disease and Creutzfeldt Jakob disease the human equivalent until increased scientific evidence and public pressure forced them to take action resulting in the slaughter of more than one million cattle The second study looks at what is commonly known as hamburger disease caused by a virulent form of the E coli bacterium which has struck thousands and killed over thirty people in the last few years Despite its widespread effects it is unclear whether scientific knowledge on preventing the disease is reaching the public Other case studies include the use of a genetically engineered hormone to increase milk production in cows health risks associated with silicone breast implants public controversies surrounding dioxins and PCBs and the introduction of agricultural biotechnology These case studies show that institutions routinely fail to communicate the scientific basis of various high profile risks These failures to inform the public make it difficult for governments industry and society to manage risk controversies sensibly and often result in massive costs With its detailed analyses of specific risk management controversies *Mad Cows and Mother's Milk* will help us avoid future mistakes *Mad Cow U.S.A.* Sheldon Rampton, John Clyde Stauber, 1997 *Mad Cow U S A* shatters the false belief that the government and food industry would never let it happen here Even as tens of thousands of cows died in Britain the government denied the risk to human beings Knowing the similar risk in the U S government and industry have managed a successful public relations offensive to keep Americans in the dark Rampton and Stauber expose for the first time the deadly game of dementia roulette being played with our food supply **How the Cows Turned Mad** Maxime Schwartz, 2003-03-15 A gripping biological detective story that traces the history of mad cow disease and related infectious brain disease of livestock and people The book also illustrates dramatically how scientific progress unfolds as researchers in various countries pursue new ideas and leads in order to identify the cause of and relationship between these enigmatic diseases *Mad Cow Disease* Carmen Ferreira, 2009 Explains mad cow disease what it is how it is passed from cows to humans and possible treatment options *Mad Cow Crisis* Scott Ratzan, 2005-08-05 The announcement that BSE might cause a fatal human disease Creutzfeldt Jacob disease CJD triggered enormous media attention public alarm and government wrangling that threatened the future of European integration As Scott Ratzan argues It is my belief that the BSE crisis represents a quintessential case that will go down in history as the Exxon Valdez Union Carbide's Bhopal accident and other such cases of interdisciplinary study This book offers lessons learned from the crisis with contributions from experts with different viewpoints veterinarians Eurocrats public relations experts politicians policy makers journalists and representatives of the beef industry It also offers a compilation of the key reports from governmental bodies as a case study in policy making scientific health discovery and dissemination of

Bioterrorism J. V. Borrelli, 2007 A bioterrorism attack is the deliberate release of viruses bacteria or other germs agents used to cause illness or death in people animals or plants These agents are typically found in nature but it is possible that they could be changed to increase their ability to cause disease make them resistant to current medicines or to increase their ability to be spread into the environment Biological agents can be spread through the air through water or in food Terrorists may use biological agents because they can be extremely difficult to detect and do not cause illness for several hours to several days Some bioterrorism agents like the smallpox virus can be spread from person to person and some like anthrax can not This new book presents new analyses on the prevention of preparedness for and protection from Farm Sanctuary Gene Baur, 2008-11-04 Written by one of the foremost experts on animal rights Farm Sanctuary is an insightful thought provoking examination of the ethical questions involved in the breeding of animals for food *The Collectors of Lost Souls* Warwick Anderson, 2019-08-27 This riveting account of medical detective work traces the story of kuru a fatal brain disease and the pioneering scientists who spent decades searching for its cause and cure Winner William H Welch Medal American Association for the History of Medicine Winner Ludwik Fleck Prize Society for Social Studies of Science Winner General History Award New South Wales Premier's History Awards When whites first encountered the Fore people in the isolated highlands of colonial New Guinea during the 1940s and 1950s they found a people in the grip of a bizarre epidemic Women and children succumbed to muscle weakness uncontrollable tremors and lack of coordination until death inevitably supervened Facing extinction the Fore attributed their unique and terrifying affliction to a particularly malign form of sorcery In *The Collectors of Lost Souls* Warwick Anderson tells the story of the resilience of the Fore through this devastating plague their transformation into modern people and their compelling attraction for a throng of eccentric and adventurous scientists and anthropologists Battling competing scientists and the colonial authorities the brilliant and troubled American doctor D Carleton Gajdusek determined that the cause of the epidemic kuru was a new and mysterious agent of infection which he called a slow virus now called a prion Anthropologists and epidemiologists soon realized that the Fore practice of eating their loved ones after death had spread the slow virus Though the Fore were never convinced Gajdusek received the Nobel Prize for his discovery Now revised and updated the book includes an extensive new afterword that situates its impact within the fields of science and technology studies and the history of science Additionally the author now reflects on his long engagement with the scientists and the people afflicted describing what has happened to them since the end of kuru This astonishing story links first contact encounters in New Guinea with laboratory experiments in Bethesda Maryland sorcery with science cannibalism with compassion and slow viruses with infectious proteins reshaping our understanding of what it
