On Being And Saying Essays For Richard Cartwright:

On Being and Saying Judith Jarvis Thomson, 1987 Richard Cartwright's impact on other philosophers has been as much a product of his own personal contact with students and colleagues as the result of his written work. The essays in this book demonstrate the deep influence he has had not only by his thinking but equally by his style and manner and above all by his clarity and purity of intention. All of the essays are concerned with the questions of logic, language and metaphysics that have been at the core of Cartwright's own work. The chapters and their authors are: The Consistency of Frege's Foundations of Arithmetic, George Boolos; Russell's No Classes Theory of Classes, Leonard Linsky; Quine's Indeterminacy, Charles S. Chihara; Justifying Symbolizations, Harold Levin; Substitutivity, Scott Soames; Moore Paradox, Sincerity Conditions and Epistemic Qualification, Charles E. Caton; Matching Illocutionary Act Types, William P. Alston; Scattered Objects, Roderick M. Chisholm; Parts and Places, Helen Morris; Cartwright Ruminations on an Account of Personal Identity, Judith Jarvis Thomson; Godel's Ontological Proof, Jordan Howard Sobel; The Concept of the Subject Contains the Concept of the Predicate, David Wiggins. Judith Jarvis Thomson is Professor of Philosophy at MIT. Philosophical Essays, the first collection of Richard Cartwright's work, is being published simultaneously by The MIT Press.

Logic, Logic, and Logic George Boolos, 1998 George Boolos was one of the most prominent and influential logician philosophers of recent times. This collection, nearly all chosen by Boolos himself shortly before his death, includes thirty papers on set theory, second order logic and plural quantifiers on Frege, Dedekind, Cantor and Russell and on miscellaneous topics in logic and proof theory including three papers on various aspects of the Godel theorems. Boolos is universally recognized as the leader in the renewed interest in studies of Frege's work on logic and the philosophy of mathematics. John Burgess has provided introductions to each of the three parts of the volume and also an afterword on Boolos's technical work in provability logic which is beyond the scope of this volume.

Starting with Leibniz R. S. Woolhouse, Roger Woolhouse, 2010-01-01 Introduces students to the life work and ideas of Gottfried Leibniz, taking the reader new to the subject through the key themes of his writings.

Reformed Epistemology and the Problem of Religious Diversity Joseph Kim, 2012-09-27 In contemporary philosophy of religion there has been heated debate about whether the diversity of mutually exclusive religious beliefs is a good reason to give up any form of religious exclusivism. Christian exclusivism, for instance, on one hand, Christian exclusivists defend the truth of Christian beliefs; on the other hand, the opponents of Christian belief base their criticism upon religious diversity and disagreement. Kim defends Christian belief and Alvin Plantinga's version of Reformed Epistemology.

[Gottlob Frege: Frege's philosophy in context](#) Michael Beaney, Erich H. Reck, 2005 This collection brings together recent scholarship on Frege including new translations of German material which is made available to Anglophone scholars for the first time.

Columbia Companion to Twentieth-Century Philosophies Constantin V. Boundas, 2007 Columbia Companion to Twentieth Century Philosophies is the first guide to cover both the Anglo American analytic and European continental traditions. Organized thematically, the

volume thoroughly discusses the major movements and fields of each tradition and features the contributions of highly distinguished specialists in their fields This book is divided into three sections The first is devoted to highlighting the multidimensional work of philosophers identified with the analytic tradition with Nicholas Rescher writing on neoidealism Josephine Donovan commenting on feminist philosophy Tyler Burge discussing the philosophy of language and mind and Robert Hanna reflecting on Kant s legacy The second section presents the thought of those who identified themselves with the continental tradition featuring Jean Grondin on hermeneutics Leonard Lawlor on phenomenology Charles Scott on postmodernism and Babette Babich on the philosophy of science This volume also covers logical positivism naturalism pragmatism aesthetics existentialism Marxism the Frankfurt School structuralism psychoanalysis political philosophy ethics and the philosophy of religion The final section addresses concurrent trends in Indian Chinese Japanese and African philosophy and a comprehensive introduction by the editor not only provides a thorough outline of the problems and issues of the analytic and continental traditions but also boldly challenges the conviction that the two approaches must be rivals Columbia Companion to Twentieth Century Philosophies is an invaluable overview of the ideas that have shaped a monumentally important century in the history of philosophy offering an unusually panoramic perspective that allows readers to form their own interpretations of original materials

Fundamentals of Ontological Commitment Paolo

Valore,2016-01-15 Scientific literature on particular themes in ontology is extremely abundant but it is often very hard for freshmen or sophomores to find a red thread between the various proposals This text is an opinionated introduction a preliminary text to research in ontology from the so called standard approach to ontological commitment that is from the particular point of view that connects ontological questions to quantificational questions It offers a survey of this viewpoint in ontology together with their possible applications through a broad array of examples and open problems and at the same time essential references to the classics of philosophy so as to allow non specialists to understand the terms and analysis procedures characterizing the discipline Its result is a wide ranging overview of the issues tackled by ontology with a particular focus on the most relevant problems of contemporary debate categorial taxonomies nonexistent objects case studies of ontological debates in specific fields of knowledge

Reference and Beyond Michael Devitt,2025-07-20 In *Reference and Beyond* Michael Devitt explores philosophy of language from a naturalistic approach A dominant theme of this book is the semantics of proper names definite descriptions and demonstratives It shows that these terms have conventional referential uses to express singular thoughts Those uses are explained by a unified causal theory a term s reference is largely fixed in an object by a causal link between the person and the object when it is or was the focus of that person s perception Furthermore Devitt argues that a term s meaning is its largely causal mode of reference So a related theme is the rejection of the direct reference view that the meaning of a name is its bearer Another theme in *Reference and Beyond* concerns thoughts and their ascriptions including de se thoughts and Kripke s Paderewski puzzle Devitt approaches the semantics of

ascriptions from a perspective on thoughts thus according with the slogan Put Metaphysics First that governs the author's approach to all philosophical problems A further framework is naturalism Languages are parts of the spatio-temporal world playing causal roles in virtue of certain properties meanings The task of a theory of language is then to explain the nature of those causally significant properties The book takes a very dim view of the popular idea that propositions have a place in explanations of meanings The naturalism leads to a rejection of the received view that theories of language must rest on an evidential base of speakers' intuitions and to a search for a respectable empirical base

Dictionary Of Modern American Philosophers John R. Shook, 2005-05-15 The Dictionary of Modern American Philosophers includes both academic and non-academic philosophers and a large number of female and minority thinkers whose work has been neglected It includes those intellectuals involved in the development of psychology pedagogy sociology anthropology education theology political science and several other fields before these disciplines came to be considered distinct from philosophy in the late nineteenth century Each entry contains a short biography of the writer an exposition and analysis of his or her doctrines and ideas a bibliography of writings and suggestions for further reading While all the major post-Civil War philosophers are present the most valuable feature of this dictionary is its coverage of a huge range of less well-known writers including hundreds of presently obscure thinkers In many cases the Dictionary of Modern American Philosophers offers the first scholarly treatment of the life and work of certain writers This book will be an indispensable reference work for scholars working on almost any aspect of modern American thought

The Applicability of Mathematics as a Philosophical Problem Mark Steiner, 2009-07-01 This book analyzes the different ways in which mathematics is applicable to the physical sciences Mark Steiner distinguishes among the semantic problems that arise from the use of mathematics in a variety of philosophical applications

Handbook of Spatial Logics Marco Aiello, Ian Pratt-Hartmann, Johan van Benthem, 2007-09-04 The aim of this handbook is to create for the first time a systematic account of the field of spatial logic The book comprises a general introduction followed by fourteen chapters by invited authors Each chapter provides a self-contained overview of its topic describing the principal results obtained to date explaining the methods used to obtain them and listing the most important open problems Jointly these contributions constitute a comprehensive survey of this rapidly expanding subject

The Arché Papers on the Mathematics of Abstraction Roy T. Cook, 2007-11-27 This volume collects together a number of important papers concerning both the method of abstraction generally and the use of particular abstraction principles to reconstruct central areas of mathematics along logicist lines Attention is focused on extending the Neo-Fregean treatment to all of mathematics with the reconstruction of real analysis from various cut or Cauchy sequence-related abstraction principles and the reconstruction of set theory from various restricted versions of Basic Law V as case studies

Contexts Stefano Predelli, 2005-06-09 Stefano Predelli comes to the defence of the traditional formal approach to natural language semantics arguing that it has been misrepresented not only by its critics but also by its foremost defenders In Contexts he offers a

fundamental reappraisal with particular attention to the treatment of indexicality and other forms of contextual dependence which have been the focus of much recent controversy Predelli shows how his metasemantic approach deals with a variety of important semantic and philosophical puzzles He analyses the relationship between indexicality and logical validity discussing well known problem cases and demonstrating the limits of token reflexive systems He investigates the relationships between truth conditions and assignments of truth values at particular points of evaluation and shows that so called contextualist worries do not undermine the traditional semantic approach Finally he shows that semantic befuddlement about the interpretation of attitude reports is based on an inadequate understanding of the scope of natural language semantics Contexts will be of great interest to all philosophers of language and to many linguists **Hume's**

Reflection on Religion Miguel A. Badía Cabrera, 2012-12-06 This book presents a comprehensive interpretation of Hume's serious reflection on religion from the perspective afforded by his philosophical project and its Enlightened ends I relate his account of the origin development and significant effects of religious beliefs to his own historical works and conversely take the former as the leading thread into the disclosure of a Humean philosophy of history I also critically analyze his views about the eminently irrational and feigned character of most religious faith and its inevitable negative effect on morality Finally I examine Hume's attack on the validity of the conclusions of rational theology Reasonable support is provided for the claim that the belief in God as an intelligent author of the universe is a natural and reasonable belief This work may interest both scholars and general readers who are intrigued or troubled by religion and the issues of the utmost importance which it raises **Vagueness in Context** Stewart Shapiro, 2006-01-05 Stewart Shapiro's aim in Vagueness in Context is to develop

both a philosophical and a formal model theoretic account of the meaning function and logic of vague terms in an idealized version of a natural language like English It is a commonplace that the extensions of vague terms vary with such contextual factors as the comparison class and paradigm cases A person can be tall with respect to male accountants and not tall even short with respect to professional basketball players The main feature of Shapiro's account is that the extensions and anti extensions of vague terms also vary in the course of a conversation even after the external contextual features such as the comparison class are fixed A central thesis is that in some cases a competent speaker of the language can go either way in the borderline area of a vague predicate without sinning against the meaning of the words and the non linguistic facts Shapiro calls this open texture borrowing the term from Friedrich Waismann The formal model theory has a similar structure to the supervaluationist approach employing the notion of a sharpening of a base interpretation In line with the philosophical account however the notion of super truth does not play a central role in the development of validity The ultimate goal of the technical aspects of the work is to delimit a plausible notion of logical consequence and to explore what happens with the sorites paradox Later chapters deal with what passes for higher order vagueness vagueness in the notions of determinacy and borderline and with vague singular terms or objects In each case the philosophical picture is developed by extending and

modifying the original account This is followed with modifications to the model theory and the central meta theorems As Shapiro sees it vagueness is a linguistic phenomenon due to the kinds of languages that humans speak But vagueness is also due to the world we find ourselves in as we try to communicate features of it to each other Vagueness is also due to the kinds of beings we are There is no need to blame the phenomenon on any one of those aspects *Formalism and Beyond* Godehard Link,2014-10-09 The essays collected in this volume focus on the role of formalist aspects in mathematical theorizing and practice examining issues such as infinity finiteness and proof procedures as well as central historical figures in the field including Frege Russell Hilbert and Wittgenstein Using modern logico philosophical tools and systematic conceptual and logical analyses the volume provides a thorough up to date account of the subject *The Evolution of Modern Metaphysics* A. W. Moore,2012 This book charts the evolution of metaphysics since Descartes and provides a compelling case for why metaphysics matters ***The Blackwell Companion to Natural Theology*** William Lane Craig,J. P. Moreland,2012-02-27 With the help of in depth essays from some of the world s leading philosophers The Blackwell Companion to Natural Theology explores the nature and existence of God through human reason and evidence from the natural world Provides in depth and cutting edge treatment of natural theology s main arguments Includes contributions from first rate philosophers well known for their work on the relevant topics Updates relevant arguments in light of the most current state of the art philosophical and scientific discussions Stands in useful contrast and opposition to the arguments of the new atheists *Experimental Philosophy and its Critics* Joachim Horvath,Thomas Grundmann,2013-09-13 Experimental philosophy is one of the most recent and controversial developments in philosophy Its basic idea is rather simple to test philosophical thought experiments and philosophers intuitions about them with scientific methods mostly taken from psychology and the social sciences The ensuing experimental results such as the cultural relativity of certain philosophical intuitions has engaged and at times infuriated many more traditionally minded armchair philosophers since then In this volume the metaphilosophical reflection on experimental philosophy is brought yet another step forward by engaging some of its most renowned proponents and critics in a lively and controversial debate In addition to that the volume also contains original experimental research on personal identity and philosophical temperament as well as state of the art essays on central metaphilosophical issues like thought experiments the nature of intuitions or the status of philosophical expertise This book was originally published as a special issue of Philosophical Psychology ***Meaning without Truth*** Stefano Predelli,2013-07-11 Stefano Predelli presents an original account of the relationships between the central semantic notions of meaning and truth Part One begins with the study of phenomena that have little or nothing to do with the effects of meaning on truth Predelli warns against what he calls the Fallacy of Misplaced Character and is concerned with sentences such as there sometimes exist sentences containing exactly eight words I am now uttering a non contradictory sentence or I exist In Part Two he moves on to further cases which bear no interesting relations with questions of truth but which unlike

those in Part One have important repercussions on questions of meaning The resulting Theory of Bias is applied to expressive interjections with a chapter about the logical properties of *alas* to instances of register and coarse slang to honorifics and nicknames and to derogatory slurs Part Three draws from the previous two parts and argues that some notorious semantic problems ought to be approached from the viewpoint of the Theory of Bias Predelli starts with vocatives dates and signatures and introduces the notion of obstinate indexicality which then guides his solution to Quine's Giordano puzzle his version of the demonstrative theory quotation and his defence of the bare boned approach to demonstratives and demonstrations
