*Rehabilitation* Wojciech Radomski, 2002-10-28 In the last two decades the rapid deterioration of bridge structures has  
 become a serious technical and economical problem in many countries including highly developed ones Therefore bridge  
 rehabilitation has also become a very essential factor sometimes even a decisive one in contemporary bridge engineering The  
 book covers in synthetic form nearly all the most important problems concerning bridge rehabilitation such as bridge  
 superstructure and substructure the typical damage observed in bridges as well as the assessment and evaluation techniques  
 of their technical condition The book is intended mainly for postgraduate university students Therefore all the problems are  
 mostly presented in their physical chemical and technical as well as economical aspects The relevant requirements are  
 treated as objective ones i.e. irrespective of the rules standards regulations or guidelines particular to any country This  
 approach to the subject gives the book a more general character and therefore makes it a useful text for most civil  
 engineering courses a Municipal Engineering, 1910 **Engineering and Contracting**, 1908 *Subject Index of the*
