Tian-Xiang Yue, 2011-02-04 Although GIS provides powerful functionality for spatial analysis data overlay and storage these spatially oriented systems lack the ability to represent temporal dynamics which is a major impediment to its use in surface modeling However rapid development of computing technology in recent years has made real time spatial analysis and real time data visualization become realizable Based on newly developed methods Surface Modeling High Accuracy and High Speed Methods explores solutions to big error and slow efficiency problems two critical challenges that have long plagued those working in with geographical information system GIS and computer aided design CAD By developing high accuracy and high speed methods for surface modeling the book builds a bridge between the mathematical oriented theory of surface modeling and the user oriented application where the user is actually able to retrieve information on the method itself The author examines a novel method of high accuracy surface modeling HASM in terms of the fundamental theorem of surfaces He then analyzes the coefficient matrix and develops an adaptive method of HASM HASM AM a multi grade method of HASM HASM MG and an adjustment method of HASM HASM AD He uses numerical tests and real world studies to demonstrate that HASM AM HASM MG and HASM AD have highly accelerated computational speed especially for simulations with huge computational work Building on this the book discusses a HASM based method for dynamic simulation HASM FDS and then applies HASM methods to simulate terrains climate change ecosystem change land cover and soil properties It demonstrates HASM s potential for simulating population distribution human carrying capacity ecosystem services ecological diversity change detection and wind velocity The book concludes with a discussion of the problems that exist in surface modeling on a global level and evaluates possible solutions to these problems
