Stability and Stabilization of Nonlinear Systems Dirk Aeyels, Francoise Lamnabhi-Lagarrigue, Arjan van der Schaft, 2008-01-26 These papers were presented at the first EC TMR Nonlinear Control Network Workshop on Stability and Stabilization of Nonlinear Systems that took place in March 1999 Ghent Belgium The TMR programme offers a unique opportunity for the academic community to expand their knowledge share their experience and identify and discuss strategic issues in aspects of nonlinear control engineering The aim is to create a resource centre of available expertise and research interests This outstanding reference volume presents current and emerging research directions including Stability analysis of nonlinear dynamical systems and converse Lyapunov theorems Stabilization and regulation of nonlinear dynamical control systems Control of physical systems using physics based Lyapunov functions and passivity as well as bifurcation analysis and optimal control This collection of peer reviewed papers provides a comprehensive overview of this field of research for graduate students and researchers in engineering and applied mathematics

Finite-Spectrum Assignment for Time-Delay Systems Qing-Guo Wang, Tong H. Lee, Kok K. Tan, 2007-10-03 The presence of considerable time delays in many industrial processes is well recognized and achievable performances of conventional unity feedback control systems are degraded if a process has a relatively large time delay compared to its time constants In this case dead time compensation is necessary in order to enhance the performances The most popular scheme for such compensation is the Smith Predictor but it is unsuitable for unstable or lightly damped processes because the compensated closed loop system always contains the process poles themselves An alternative scheme for delay elimination from the closed loop is the finite spectrum assignment FSA strategy and it can arbitrarily assign the closed loop spectrum One may note that the Smith Predictor Control can be found in delay systems control books and many process control books but the FSA control is rarely included in these books It is therefore timely and desirable to fill this gap by writing a book which gives a comprehensive treatment of the FSA approach This is useful and worthwhile since the FSA provides not only an alternative way but also certain advantages over the Smith Predictor The book presents the state of the art of the finite spectrum assignment for time delay systems in frequency domain It mainly contains those works carried out recently by the authors in this field Most of them have been published and others are awaiting publication They are assembled together and reorganized in such a way that the presentation is logical smooth and systematic

Control of Uncertain Systems with Bounded Inputs Sophie Tarbouriech,1997-07-04 In practical control problems many constraints have to be handled in order to design controllers which operate in a real environment By combining results on robust control and saturating control this book attempts to provide positive help for practical situations and as one of the first books to merge the two control fields it should generate considerable interest in scientific academic circles The ten chapters which deal with stabilization and control of both linear and nonlinear systems are each independent in their approach some deal purely with theoretical results whilst others concentrate on ways in which the theory can be applied The book's unity is secured by the desire to formulate control design requirements through constraints on input and model uncertainty description Control of Indefinite Nonlinear Dynamic Systems Stanislav Vasil'evich Emel'ianov,Isaak A.

Burovoi,Fedor Yu. Levada,1998-01-30 This book is written for the wide circle of readers who take an interest in concepts of basic sciences specifically cybernetics automation and control It aims to provide a new technique for the solution of a range of automatic control problems using new types of feedback loops Simple examples are used to illustrate the basic problems the important aspects of the theory of automatic control and the difficulties that have to be faced when considering the automation of actual objects *Control of Indefinite Nonlinear Dynamic Systems* is the first book to set out an effective regular procedure for the synthesis of robust feedback loops This signifies an advancement in the area of general feedback which deal with problems of robust control under conditions of uncertainty Control Problems in Robotics and Automation

Journal of Dynamic Systems, Measurement, and Control, 1996 Learning Automata and Stochastic Optimization A.S. Poznyak, K. Najim, 1997-03-12 In the last decade there has been a steadily growing need for and interest in computational methods for solving stochastic optimization problems with or without constraints Optimization techniques have been gaining greater acceptance in many industrial applications and learning systems have made a significant impact on engineering problems in many areas including modelling control optimization pattern recognition signal processing and diagnosis Learning automata have an advantage over other methods in being applicable across a wide range of functions Featuring new and efficient learning techniques for stochastic optimization and with examples illustrating the practical application of these techniques this volume will be of benefit to practicing control engineers and to graduate students taking courses in optimization control theory or statistics *Experimental Robotics*, 1995 **Complex Robotic Systems** Pasquale Chiacchio, Stefano Chiaverini, 1998-04-09 Robotic systems have proved themselves to be of increasing importance and are widely adopted to substitute for humans in repetitive or hazardous situations Their diffusion has outgrown the limits of industrial applications in manufacturing systems to cover all aspects of exploration and servicing in hostile environments such as undersea outer space battlefields and nuclear plants Complex robotic systems ie robotic systems with a complex structure and architecture are gaining increasing attention from both the academic community and industrial users The modelling and control problems for these systems cannot be regarded as simple extensions of those for traditional single manipulators since additional complexity arises to accomplish tasks there is the need to ensure coordinated motion of the whole system together with management of interaction between each component of the system This book focuses on two examples of complex robotic systems namely co operating manipulators and multi fingered hands It is addressed to graduate students as well as to researchers in the field *Theory and Practice of Robots and Manipulators* Adam Morecki, Giovanni Bianchi, C. Rzymkowski, 1997 **Autonomous Robotic Systems** Anibal T. de Almeida, 1998-05-26 This book constitutes the presentations made at the Advanced Research Workshop on Autonomous Robotic Systems which was held at the University of Coimbra Portugal June 1997 The aim of the meeting was to bring together leading researchers in the area of autonomous systems for mobility and manipulation and the aim of this book is to share the presentations with the reader The book

presents the most recent developments in the field Topics include sensors and navigation in mobile robots robot co operation telerobotics legged robots climbing robots and applications Existing and emerging applications of autonomous systems are described in great detail including applications in forestry cleaning mining tertiary buildings assistance to the elderly and handicapped and surgery The chapters are written in a structured and advanced tutorial style by leading specialists from Europe Australia Japan and USA The style will allow the reader to grasp the state of the art and research directions in the area of autonomous systems *Theory and Practice of Robots and Manipulators* A.
