Roots Of Scientific Thought A Cultural P:

Roots of Scientific Thought Philip Paul Wiener, 1957 *Roots of Scientific Thought* Philip P. Wiener, Aaron Noland, 1957

National Library of Medicine Current Catalog National Library of Medicine (U.S.), 1970 First multi year cumulation covers six years 1965 70 **A History of Natural Philosophy** Edward Grant, 2007-01-22 Natural philosophy encompassed

all natural phenomena of the physical world It sought to discover the physical causes of all natural effects and was little concerned with mathematics By contrast the exact mathematical sciences were narrowly confined to various computations that did not involve physical causes functioning totally independently of natural philosophy Although this began slowly to change in the late Middle Ages a much more thoroughgoing union of natural philosophy and mathematics occurred in the seventeenth century and thereby made the Scientific Revolution possible The title of Isaac Newton s great work *The Mathematical Principles of Natural Philosophy* perfectly reflects the new relationship Natural philosophy became the Great Mother of the Sciences which by the nineteenth century had nourished the manifold chemical physical and biological sciences to maturity thus enabling them to leave the Great Mother and emerge as the multiplicity of independent sciences we know today

The Social Origins of Modern Science P. Zilsel, 2013-03-07 Edgar Zilsel 1891 1944 lived through the best of times and worst of times through the renewal of scientific optimism and humane politics and through the massive social collapse into idolatrous barbarism With it all and with his personal and family crises in Vienna and later in America Zilsel was I believe a th heroic indeed a model scholar of the first half of the 20 century He was widely admired as a teacher at high schools in workers education in research tutoring and seminars He was an original investigator on matters of the methodology of science and of the history of the sciences He was a social and political analyst as a critical Marxist of the turmoil of Vienna in the 20s Above all he achieved so much as a sociological historian who undertook re search on two central facts of the early modern world recognition of the cre ative individual and the ideal of genius and the conditions and realities of the coming of science to European civilization *The Uses of Science in the Age of Newton* John G.

Burke, 2023-11-15 This title is part of UC Press s Voices Revived program which commemorates University of California Press s mission to seek out and cultivate the brightest minds and give them voice reach and impact Drawing on a backlist dating to 1893 Voices Revived makes high quality peer reviewed scholarship accessible once again using print on demand technology This title was originally published in 1983

A Culture of Fact Barbara J. Shapiro, 2000 Shapiro traces the genesis of the fact a modern concept that originated not in natural science but in legal discourse She follows the concept s evolution and diffusion across a variety of disciplines in early modern England *Gaither's Dictionary of Scientific Quotations* Carl C.

The Renaissance Print, 1470-1550 David Landau, Peter W. Parshall, 1994-01-01 Through an examination of material and institutional circumstances through the study of workshop practices and of technical and aesthetic experimentation this book seeks to give an account of the ways in which Renaissance prints were realized distributed acquired and handled by their public

Science and Civilisation in China: Volume 2, History of Scientific Thought Joseph Needham, Ling Wang, 1956-01-03 The second volume of Dr Joseph Needham's great work *Science and Civilisation in China* is devoted to the history of scientific thought Beginning with ancient times it describes the Confucian milieu in which arose the organic naturalism of the great Taoist school the scientific philosophy of the Mohists and Logicians and the quantitative materialism of the Legalists Thus we are brought on to the fundamental ideas which dominated scientific thinking in the Chinese middle ages The author opens his discussion by considering the remote and pictographic origins of words fundamental in scientific discourse and then sets forth the influential doctrines of the Two Forces and the Five Elements Subsequently he writes of the important sceptical tradition the effects of Buddhist thought and the Neo Confucian climax of Chinese naturalism Last comes a discussion of the conception of Laws of Nature in China and the West

The History and Poetics of Scientific Biography Thomas Söderqvist, 2016-03-03 Biographies of scientists carry an increasingly prominent role in today's publishing climate Traditional historical and sociological accounts of science are complemented by narratives that emphasize the importance of the scientific subject in the production of science Not least is the realization that the role of science in culture is much more accessible when presented through the lives of its practitioners Taken as a genre such biographies play an important role in the public understanding of science In recent years there has been an increasing number of monographs and collections about biography in general and literary biography in particular However biographies of scientists engineers and medical doctors have rarely been the topic of scholarly inquiry As such this volume of essays will be welcomed by those interested in the genre of science biography and who wish to re-examine its history foundational problems and theoretical implications Borrowing approaches and methods from cultural studies and the history philosophy and sociology of science the contributions cover a broad range of subjects periods and locations By presenting such a rich diversity of essays the volume is able to chart the reoccurring conceptual problems and devices that have influenced scientific biographies from classical antiquity to the present day In so doing it provides a compelling overview of the history of the genre suggesting that the different valuations given scientific biography over time have been largely fuelled by vested professional interests
