which was chosen for SLT Solid Logic Technology in the 1960s was easily extended to integrated circuits in the 70s and VLSI in the 80s and 90s Three I O bumps have grown to 3000 with even more anticipated for the future The package families have evolved from thick film SLT to thin film metallized ceramic to co fired multi layer ceramic A later family of ceramics with matching expansivity to silicon and copper internal wiring was developed as a predecessor of the chip interconnection revolution in copper multilevel submicron wiring Powerful server packages have been developed in which the combined chip and package copper wiring exceeds a kilometer All of this was achieved with the constant objective of minimizing circuit delays through short efficient interconnects

#### **Fairness and Division of Labor in Market Societies** Hyeong-Ki Kwon,2004-10-01

Contrary to the explanations offered by the theory of non reflexive path dependent institutionalism the U S and the German automotive industries undertook strikingly similar patterns of industry modification under tough international competition during the 1990s departing from their traditional national

patterns By investigating the processes of the U S and German adjustments the author critically reconsiders the prevalent paradigms of political economy and comes to the conclusion that the evidence does not confirm the neoliberal paradigm In order to better account for the recomposition of new market relations which the author terms converging but non liberal and diverging but not predetermined markets he proposes an alternative model of politics among reflexive agents emphasizing different kinds of problem solving practices among those reflexive agents He argues that different forms and regimes of market are established in the process of recomposition in which agents reflect upon not only market rationality but also upon their own institutions creating new norms
