Seeing Red At Green Lights:

Secret Worlds Martin Stevens, 2021-06-10 Martin Stevens explores the extraordinary variety of senses in the animal kingdom and discusses the cutting edge science that is shedding light on these secret worlds Our senses of vision smell taste hearing and touch are essential for us to respond to threats communicate and interact with the world around us This is true for all animals their sensory systems are key to survival and without them animals would be completely helpless However the sensory systems of other animals work very differently from ours For example many animals from spiders to birds can detect and respond to ultraviolet light to which we are blind Other animals including many insects rodents and bats can hear high frequency ultrasonic sounds well beyond our own hearing range Many other species have sensory systems that we lack completely such as the magnetic sense of birds turtles and other animals or the electric sense of many fish These differences in sensory ability have a major bearing on the ways that animals behave and live in different environments and also affect their evolution and ecology In this book Martin Stevens explores the remarkable sensory systems that exist in nature and what they are used for Discussing how different animal senses work he also considers how they evolve how they are shaped by the environment in which an animal lives and the pioneering science that has uncovered how animals use their senses Throughout he celebrates the remarkable diversity of life and shows how the study of sensory systems has shed light on some of the most important issues in animal behaviour physiology and evolution

Seeing Red Jose P. Zagal, Benj Edwards, 2024-05-14 The curious history technology and technocultural context of Nintendo's short lived stereoscopic gaming console the Virtual Boy With glowing red stereoscopic 3D graphics the Virtual Boy cast a prophetic hue Shortly after its release in 1995 Nintendo's balance sheet for the product was in the red as well Of all the innovative long shots the game industry has witnessed over the years perhaps the most infamous and least understood was the Virtual Boy Why the Virtual Boy failed and where it succeeded are questions that video game experts Jos Zagal and Benj Edwards explore in *Seeing Red* but even more interesting to the authors is what the platform actually was what it promised how it worked and where it fit into the story of gaming Nintendo released the Virtual Boy as a standalone table top device in 1995 and quickly discontinued it after lackluster sales and a lukewarm critical reception In *Seeing Red* Zagal and Edwards examine the device's technical capabilities its games and the cultural context in the US in the 1990s when Nintendo developed and released the unusual console The Virtual Boy in their account built upon and extended an often forgotten historical tradition of immersive layered dioramas going back 100 years that was largely unexplored in video games at the time The authors also show how the platform's library of games conveyed a distinct visual aesthetic style that has not been significantly explored since the Virtual Boy's release having been superseded by polygonal 3D graphics The platform's meaning they contend lies as much in its design and technical capabilities and affordances as it does in an audience's perception of those capabilities Offering rare insight into how we think about video game platforms *Seeing Red* illustrates where perception and context come quite literally into play *Ophthalmology Secrets in Color: First South Asia Edition - E-Book* Janice Gault, 2016-07-23 A question and answer format bulleted lists mnemonics and practical tips from the authors expedite reference and review Two color page layout Key Points boxes and lists of useful websites enhance your reference power Top 100 Secrets section combines the top 100 high yield facts into one chapter providing a concise overview of the latest issues in ophthalmology High yield content is ideal for exam preparation Key clinical images are presented in full color Portable size is designed to fit perfectly into a lab coat pocket **Science Web Text** Peter Horsfall, 2002 This textbook follows the QCA Scheme of Work It has extended page layout to allow full coverage of topics and learning objectives and learning methods to support student planning and learning at the start of each chapter Ideas and evidence in science are fully supported and homework and revision questions are included at the end of each chapter Fundamentals of Solid-State Lighting Vinod Kumar Khanna, 2014-06-03 Compared to traditional electrical filaments arc lamps and fluorescent lamps solid state lighting offers higher efficiency reliability and environmentally friendly technology LED solid state lighting is poised to take over conventional lighting due to cost savings there is pretty much no debate about this In response to the

Seeing, second edition John P. Frisby,James V. Stone,2010-04-02 An accessible yet rigorous and generously illustrated exploration of the computational approach to the study of biological vision Seeing has puzzled scientists and philosophers for centuries and it continues to do so This new edition of a classic text offers an accessible but rigorous introduction to the computational approach to understanding biological visual systems The authors of Seeing taking as their premise David Marr s statement that to understand vision by studying only neurons is like trying to understand bird flight by studying only feathers make use of Marr s three different levels of analysis in the study of vision the computational level the algorithmic level and the hardware implementation level Each chapter applies this approach to a different topic in vision by examining the problems the visual system encounters in interpreting retinal images and the constraints available to solve these problems the algorithms that can realize the solution and the implementation of these algorithms in neurons Seeing has been thoroughly updated for this edition and expanded to more than three times its original length It is designed to lead the reader through the problems of vision from the common but mistaken idea that seeing consists just of making pictures in the brain to the minutiae of how neurons collectively encode the visual features that underpin seeing Although it assumes no prior knowledge of the field some chapters present advanced material This makes it the only textbook suitable for both undergraduate and graduate students that takes a consistently computational perspective offering a firm conceptual basis for tackling the vast literature on vision It covers a wide range of topics including aftereffects the retina receptive fields object recognition brain maps Bayesian perception motion color and stereopsis MatLab code is available on the book s website which includes a simple demonstration of image convolution
