Seesaw 2 Sb Amanda Cant, 2003-01-30 **Supersymmetry Beyond Minimality** Shaaban Khalil, Stefano Moretti, 2017-12-06 Supersymmetry SUSY is one of the most important ideas ever conceived in particle physics. It is a symmetry that relates known elementary particles of a certain spin to as yet undiscovered particles that differ by half a unit of that spin, known as Superparticles. Supersymmetric models now stand as the most promising candidates for a unified theory beyond the Standard Model. SM SUSY is an elegant and simple theory, but its existence lacks direct proof. Instead of dismissing supersymmetry altogether, *Supersymmetry Beyond Minimality from Theory to Experiment* suggests that SUSY may exist in a more complex and subtle manifestation than the minimal model. The book explores in detail non-minimal SUSY models in a bottom-up approach that interconnects experimental phenomena in the fermionic and bosonic sectors. The book considers with equal emphasis the Higgs and Superparticle sectors and explains both collider and non-collider experiments. Uniquely, the book explores charge parity and lepton flavour violation. *Supersymmetry Beyond Minimality from Theory to Experiment* provides an introduction to well-motivated examples of such non-minimal SUSY models, including the ingredients for generating neutrino masses and for relaxing the tension with the heavily constraining Large Hadron Collider (LHC) data. Examples of these scenarios are explored in depth, in particular the discussions on Next-to-Minimal Supersymmetric SM (NMSSM) and B-L Supersymmetric SM (BLSSM). **Norwegian Dictionary** Forlang A.S. Cappelens, 2015-08-12 This 2-way Dictionary is ideal for both linguists and the serious learner and user of Norwegian. Translations are supported by examples and entries are supported by an invaluable section covering aspects of Norwegian pronunciation and grammar. Inorganic Chemistry, 2012 **Search for the "totally Unexpected" in the LHC Era** Antonino Zichichi, 2010 From 29 August to 7 September 2007 a large group of distinguished lecturers and young physicists from various countries met in Erice, Italy, at the Ettore Majorana Foundation and Centre for Scientific Culture (EMFCSC) to attend the 45th Course of the International School of Subnuclear Physics: Search for the Totally Unexpected in the LHC era. This book is a collection of lectures delivered during the course, which covered the most recent advances in theoretical physics and the latest results from the current experimental facilities. In the School's effort to encourage and promote young physicists, recognition at an international level, students who distinguished themselves for the excellence of their research have been given the opportunity to publish their presentation in this volume.
