Perceptions of the Holocaust in Europe and Muslim Communities Günther Jikeli, Joëlle Allouche-Benayoun, 2012-11-08 The way people think about the Holocaust is changing The particular nature of the transformation depends on people's historical perspectives and how they position themselves and their nation or community vis-à-vis the tragedy Understandably European Muslims perceive the Holocaust as less central to their history than do other Europeans Yet while the acknowledgement and commemoration of the horrors of the Holocaust are increasingly important in Europe Holocaust denial and biased views on the Holocaust are widespread in European Muslims countries of origin In this book a number of distinguished scholars and educators of various backgrounds discuss views of the Holocaust

Problematic views are often influenced by a persistent attitude of Holocaust denial which is derived in part from discourses in the Muslim communities in their countries of origin The essays collected here explore the backgrounds of these perceptions and highlight positive approaches and developments Many of the contributions were written by people working in the field and reflecting on their experiences This collection also reveals that problematic views of the Holocaust are not limited to Muslim communities

Conviction Oliver Rollins,2021-07-13 Exposing ethical dilemmas of neuroscientific research on violence this book warns against a dystopian future in which behavior is narrowly defined in relation to our biological makeup Biological explanations for violence have existed for centuries as has criticism of this kind of deterministic science haunted by a long history of horrific abuse Yet this program has endured because of and not despite its notorious legacy Today s scientists are well beyond the nature versus nurture debate Instead they contend that scientific progress has led to a nature and nurture biological and social stance that allows it to avoid the pitfalls of the past In *Conviction* Oliver Rollins cautions against this optimism arguing that the way these categories are imagined belies a dangerous continuity between past and present The late 1980s ushered in a wave of techno scientific advancements in the genetic and brain sciences Rollins focuses on an often ignored strand of research the neuroscience of violence which he argues became a key player in the larger conversation about the biological origins of criminal violent behavior Using powerful technologies neuroscientists have rationalized an idea of the violent brain or a brain that bears the marks of predisposition toward dangerousness Drawing on extensive analysis of neurobiological research interviews with neuroscientists and participant observation Rollins finds that this construct of the brain is ill equipped to deal with the complexities and contradictions of the social world much less the ethical implications of informing treatment based on such simplified definitions Rollins warns of the potentially devastating effects of a science that promises to predict criminals before the crime is committed in a world that already understands violence largely through a politic of inequality
