their impact on indirect costs such as loss of work and home productivity is enormous. These problems are addressed and measures of prevention such as smoking cessation are included. Other special challenges including topics such as indoor and outdoor air pollution, climate change, poisoning with pesticides, snakebite toxicity, pulmonary manifestations of tropical infections and industrial accidents such as the tragedy seen in Bhopal, Madhya Pradesh with methyl isocyanate have been well covered. However, as globalization flattens the playing field and countries leap to industrialization, cultural beliefs, natural resources, climate and geography have slowed the pace of development in many parts of the world. Poverty leads to malnutrition, homelessness, lack of education and poor access to health care. Overcrowded cities and rural underdevelopment are other challenges that impact health in the various parts of the world. Moreover, epidemics of HIV, drug abuse and smoking addiction take a greater toll on the population. Yes, the world is flat, but the terrain is filled with mountains and valleys and local problems demand local solutions. And these local problems need to be explored and presented with a scholarly perspective.

The *Textbook of Pulmonary and Critical Care Medicine* has successfully incorporated these sociodemographic factors into the subject matter. The text is well written and the chapters are carefully referenced with subjects found in all traditional pulmonary and critical care textbooks, e.g., airway diseases, interstitial lung disease, pleural disease, pulmonary neoplasia, pulmonary infection, sleep and critical care. There are several nontraditional sections as well that are practical and especially helpful to the practicing physician. These include a section on the symptom approach to lung disease, an overview of the pharmacologic agents used to treat lung disease and a comprehensive review of methods in lung diagnosis from the simple history and physical examination to the latest complex tools of interventional pulmonology. The textbook is especially unique because of the abundance of illustrations, flow charts and tables. There are many radiographic and pathologic reproductions that are especially helpful.

CT- and MR-Guided Interventions in Radiology Andreas H. Mahnken, Kai E. Wilhelm, 2025-11-24. This completely revised and extended third edition guides through an extended range of CT or MR guided procedures including a comprehensive section on interventional oncology as the most rapidly growing segment in Interventional Radiology. IR has become a rapidly growing area of modern medicine delivering minimally invasive patient focused care. Its broad variety of diagnostic and therapeutic procedures became an indispensable part of modern medicine. Cross sectional imaging techniques such as computed tomography (CT) and magnetic resonance (MR) paved the way for the rapid evolution of non vascular interventions including percutaneous biopsy, drainage, ablation and neurolysis with an ever growing range of applications and indications. A particular focus is set on clinical practice featuring also patient care and assistance on how to build an interventional service as well as on the most recent trends in robotics and artificial intelligence for non vascular IR. This book represents a most valuable source of information including step by step instructions for the radiologist dealing with all kinds of non vascular procedures.
