Paleolit Srednei Azii I Kazakhstana:

Origins of Agriculture in Western Central Asia David R. Harris, 2011-09-01 In *Origins of Agriculture in Western Central Asia* archaeologist David R Harris addresses questions of when how and why agriculture and settled village life began east of the Caspian Sea The book describes and assesses evidence from archaeological investigations in Turkmenistan and adjacent parts of Iran Uzbekistan and Afghanistan in relation to present and past environmental conditions and genetic and archaeological data on the ancestry of the crops and domestic animals of the Neolithic period It includes accounts of previous research on the prehistoric archaeology of the region and reports the results of a recent environmental archaeological project undertaken by British Russian and Turkmen archaeologists in Turkmenistan principally at the early Neolithic site of Jeitun Djeitun on the southern edge of the Karakum desert This project has demonstrated unequivocally that agropastoralists who cultivated barley and wheat raised goats and sheep hunted wild animals made stone tools and pottery and lived in small mudbrick settlements were present in southern Turkmenistan by 7 000 years ago c 6 000 BCE calibrated where they came into contact with hunter gatherers of the Keltiminar Culture It is possible that barley and goats were domesticated locally but the available archaeological and genetic evidence leads to the conclusion that all or most of the elements of the Neolithic Jeitun Culture spread to the region from farther west by a process of demic or cultural diffusion that broadly parallels the spread of Neolithic agropastoralism from southwest Asia into Europe By synthesizing for the first time what is currently known about the origins of agriculture in a large part of Central Asia between the more fully investigated regions of southwest Asia and China this book makes a unique contribution to the worldwide literature on transitions from hunting and gathering to agriculture **Archaeology, Ethnology & Anthropology of Eurasia**, 2001

The Pleistocene Old World Olga Soffer, 2013-11-11 Regional approaches to past human adaptations have generated much new knowledge and understanding Researchers working on problems of adaptations in the Holocene from those of simple hunter gatherers to those of complex sociopolitical entities like the state have found this approach suitable for comprehension of both ecological and social aspects of human behavior This research focus has however until recently left virtually untouched a major spatial and temporal segment of prehistory the Old World during the Pleistocene Extant literature on this period by and large presents either detailed site specific accounts or offers continental or even global syntheses that tend to compile site specific information but do not integrate it into whole constructs of functioning sociocultural entities This volume presents our current state of knowledge about a variety of regional adaptations that characterized prehistoric groups in the Old World before 10 000 B P The authors of the chapters consider the behavior of humans rather than that of objects or features and present data and models for various aspects of past cultures and for culture change These presentations integrate findings and understandings derived from a number of related disciplines actively involved in researching the past Data and interpretations are offered on a range of Old world regions during the
