Intramural Research Program, Fiscal Year 1974 National Cancer Institute (U.S.). Division of Cancer Biology and Diagnosis, 1974 **Catalog of Copyright Entries. Third Series** Library of Congress. Copyright Office, 1975 Cancer. A Comprehensive Treatise Frederick Becker, 2012-12-06 This series of books attempts to present in a comprehensive manner the field of oncology divided into three major areas etiology biology and therapy These books should serve as landmarks in the rapidly expanding experimental and clinical universe of this field To some they will be introductory to others a summary for all critical comments on the future of research In recognition of the difficulties inherent in attempting to pause and reflect while experimental data emerge with ever increasing rapidity the presentations take the form of overviews rather than reviews Where possible an historical perspective on observations and experimentation which led to our present understanding is presented the state of the art in technique and approach is reviewed and the gaps in knowledge and in technique are indicated The aim throughout is integration using the findings from one approach for comparison with others The tremendous expansion of interest in oncology as a medical biological discipline stimulated the publication of these volumes This expansion well warranted in terms of the impact of oncology on human morbidity has been characterized by at least three phenomena First there has been an enormous increase in money and manpower devoted to the investigation and treatment of malignancy That the research has become more and more directed or program oriented signals the interest of those beyond the scientific community in the management of the disease Second increasing numbers of students are entering the field of oncology as their major training program *Pathobiology of Cell Membranes* Benjamin F. Trump, Antti U. Arstila, 2013-10-02 *Pathobiology of Cell Membranes* Volume II is the second in a multivolume treatise on pathobiological aspects of cell membranes that aims to give the reader an overview of developments concerning the role of altered cell membranes in various pathological processes This volume includes not only information on pathobiological aspects of cell membranes as studied at the molecular and subcellular level but also important new advances in the role of membranes in human diseases such as multiple sclerosis shock lung muscle dystrophies and hematological disorders The book begins by discussing a very important and yet poorly known aspect of cellular metabolism namely the compartmentalization of intracellular cations such as sodium calcium and magnesium This is followed by separate chapters on fundamentals of membrane conformational changes in the erythrocyte model the structure and function of peroxisomes and their role in disease processes the use of invertebrate models for studies of pathological reactions and reactions of lysosomes to cellular injury Subsequent chapters deal with the pathology of skeletal muscle membranes the shock lung syndrome cellular mechanisms involved in jaundice and cholestasis and pathology of the endothelium *The Publishers' Trade List Annual*, 1979 *Clinical Cellular Immunology* Albert A. Luderer, Howard H. Weetall, 2012-12-06 The initial impetus to create a work combining aspects of cellular immunology with their clinical applications grew from the editors discussions of the areas

needs with many of the leaders in the field over a period of time From the nucleus of ideas that emerged we have here attempted to create a unified and integrated coverage of the rapidly growing field of cellular immunology research and to trace out from what seems at times a genuine plethora of important new findings the many and often important clinical implications Because of this approach the chapters of Clinical Cellular Immunology attempt to be more than critical reviews of research and clinical data going beyond analysis to synthesize working hypotheses about the functional meaning of cellular immunological phenomena and their likely clinical significance To accomplish this undertaking the text begins first with a consideration of the molecular aspects of antigen recognition Luderer and Harvey and of the ensuing regulatory program initiation Fathman Then the functional subsets of lymphocytes as they interact to produce and control the developing immune response are explored in detail Sigel et al followed by a unique analytical discussion of the action of immunosuppressive agents on the sundry inductive and regulatory immunologic pathways Sigel et al A majority of the data and conclusions drawn by the authors in the previous chapters arise from work on murine systems although wherever appropriate human data has been introduced
