### PATHOGENESIS OF INTESTINAL INFECTIONS

Edited by  
DR. M. VOINO-YASENETSKY  
and T. BAKÁCS

This book is the result of long-standing Hungarian-Soviet collaboration in studies on basic problems of the pathogenesis of dysentery, salmonellosis, and other infections caused by *Escherichia coli*. The contributors, pathologists and microbiologists, describe the human pathology of the diseases as well as the infection processes induced by various pathogens in animals. The chief aim of the authors has been to find the most essential links in the pathogenesis, i.e. to present the interaction between the organisms and the host. Special attention has been paid to the current assessment of pathological events and, further, to advantages and disadvantages of various animal models. All available information on human pathology and animal experiments from early works up to the most recent ones has been considered critically in the light of the authors' own experience. General questions of the pathogenesis of several infections are considered in the introductory chapters where also different approaches to the study of various infection processes, including experimental ones, are discussed. The book is primarily intended for the specialist (physicians, microbiologists, pathologists and others) engaged in the above problems, but may also be of interest to workers in other fields of infection pathology.
