Gareth Jones, Bernard Kaye, 2006-06-18 Plant disease epidemiology is a dynamic science that forms an essential part of the study of plant pathology This book brings together a team of 35 international experts Each chapter deals with an essential component of the subject and allows the reader to fully understand how each exerts its influence on the progress of pathogen populations in plant populations over a defined time scale This edition has new revised and updated chapters Index of Conference Proceedings British Library. The Epidemiology of Plant Diseases D.G. Jones, 2013-03-09 Most branches of science have what might be termed a core area which is both related to and helps to integrate peripheral topics to form the overall subject area Without this central link the subject is simply a collection of disparate albeit generally related topics What genetics is to plant breeding epidemiology is to the subject of plant pathology and no matter what individual topic is considered it is always possible to recognize the interaction with and relationship to epidemiological factors Broadly speaking until the 1950s plant pathology was considered

as the applied side of mycology and indeed the British Society of Plant Pathology was spawned from its mentor the British Mycological Society with considerable help from The Association of Applied Biology However with the exploding world population and the growing demand for food plant pathologists became increasingly aware of the need for a more considered measured precise and even holistic approach to their subject and particularly to plant disease management Looking back over 40 years of teaching and research in plant pathology it was very clear that the core of the subject was epidemiology and that this new study was developing a very distinct identity which was rapidly being recognized in its own right The shotgun approach to plant disease control was quickly perceived to be too inexact and almost every aspect of the subject was being reviewed refined and advanced
