Pattern Recognition by Humans and Machines Eileen C. Schwab, Howard C. Nusbaum, 2016-06-03 Pattern Recognitions by Humans and Machines Volume 2 Visual Perceptions covers aspects of research on visual perception The book discusses visual form perception figure ground organization and the spatial and temporal responses of the visual system eye movements and visual pattern perception The text also describes a computer vision model based on psychophysical experiments perspectives from brain theory and artificial intelligence and the capacity to extract shape properties and spatial relations among objects and objects parts Knowledge mediated perception is also considered Psychologists and people involved in the study of visual perceptions will find the book useful **Cognitive Approaches to Human Perception** Soledad Ballesteros, 2014-02-25 Examining the current state of the research in perception stressing contributions in visual information processing this volume provides an original and timely account of recent results obtained in this and other related areas of cognitive psychology The scope of the book is intended to be broad featuring state of the art contributions from a number of outstanding researchers from different parts of the world the United States Europe and Australia The intention is to update areas of considerable theoretical implications and active experimental investigation in this broad field called the psychology of perception This volume s main purpose is to highlight from a cognitive position a selected number of important theoretical and empirical topics which deal with critical issues in perception and other high level related cognitive processes such as attention mental representation memory word naming and semantic categorization. The studies reported were designed to answer many far reaching questions including Is the global precedence effect due to low or high level processing Can veridical and illusory perception be explained by the same theory What is the relationship between attention and perception Is perception direct or an inferential process What mechanisms are involved in picture and word naming and categorization How can word and picture processing be modeled The answers to these questions seek to unite theoretical perspectives on very important areas of cognitive psychology such as attention perception representation of visual objects and words and human memory Object Perception Bryan E. Shepp, Soledad Ballesteros, 2013-04-15 This collection of research on object perception focuses on holistic and featural properties of objects the mechanisms that produce such properties how people choose one type of property over another and how such choices are improved during the course of child development The contributions consider alternative perceptual characterizations the way in which such properties are represented in the mind how particular properties are more useful in some kinds of tasks that humans perform and how the developing child learns to cope with different properties in choosing among alternatives to optimize task performance These papers were written by specialists for specialists in experimental cognitive and developmental psychology The Cambridge Handbook of Applied Perception Research Robert R. Hoffman, Peter A. Hancock, Mark W. Scerbo, Raja Parasuraman, James L. Szalma, 2015-01-26 The Cambridge Handbook of Applied Perception Research covers core areas of

research in perception with an emphasis on its application to real world environments Topics include multisensory processing of information time perception sustained attention and signal detection as well as pedagogical issues surrounding the training of applied perception researchers In addition to familiar topics such as perceptual learning the Handbook focuses on emerging areas of importance such as human robot coordination haptic interfaces and issues facing societies in the twenty first century such as terrorism and threat detection medical errors and the broader implications of automation Organized into sections representing major areas of theoretical and practical importance for the application of perception psychology to human performance and the design and operation of human technology interdependence it also addresses the challenges to basic research including the problem of quantifying information defining cognitive resources and theoretical advances in the nature of attention and perceptual processes Pattern Recognition by Humans and Machines: Speech perception; Vol. 2: Visual perception Howard C. Nusbaum, Eileen C. Comprehension of Graphics W. Schnotz, R.W. Kulhavy, 1994-08-01 Graphic displays such as charts graphs diagrams and maps play in important role today in the design and presentation of instructional materials education There is also a strong need in scientific technical and administrative fields to visually present facts laws principles etc The increasing use of

computer based learning environments has also become an important field where the visual presentation of information plays a central role Despite the importance of graphical displays as a means of communication and the fact that research about learning and cognition has advanced rapidly in the past two decades the comprehension of graphics is still a rather unexplored area. The comprehension of graphics is not only a stimulating topic in the fields of science and instructional psychology but also in related disciplines such as semiotics and artificial intelligence Research on the comprehension of graphics complements the scientific investigation of cognitive processes in text comprehension which has contributed much to our understanding of human cognition and learning Ultimately a better understanding of the cognitive processes involved in the comprehension of graphics will have an impact not only on cognitive theory but also on educational practice

Percepts, Concepts and Categories B. Burns, 1992-10-09 The most important distinction derived from the computational view of thought is between structures and processes So proclaimed Farah and Kosslyn in 1982 arguing that structures and processes cannot be examined in isolation and concluding that converging operations are required to isolate the structure process pair that can explain a particular finding The distinction between structure and process within the study of percepts concepts and categories is considered in depth in this volume with penetrating commentaries by fellow authors concluding each chapter This interesting format achieves a broad coverage of the various aspects and implications of the structure process distinction It affords a salient indication of the diversity of positions as to the description and utility of distinguishing structures and processors At the same time it reveals that researchers specializing in areas of study ranging from simple structure and process involved in perceptual organization and texture to complex structure and process associated with reading graphs and chess expertise do utilize such a distinction in similar ways The analysis is organized into four major parts within the book Early Visual Representation and Processing Percepts Concepts Categories and Development Categories Concepts and Learning and Higher Order Representation and Processing Biometrics Anil K. Jain, Ruud Bolle, Sharath Pankanti, 2006-04-18 Biometrics Personal Identification in Networked Society is a comprehensive and accessible source of state of the art information on all existing and emerging biometrics the science of automatically identifying individuals based on their physiological or behavior characteristics In particular the book covers General principles and ideas of designing biometric based systems and their underlying tradeoffs Identification of important issues in the evaluation of biometrics based systems Integration of biometric cues and the integration of biometrics with other existing technologies Assessment of the capabilities and limitations of different biometrics The comprehensive examination of biometric methods in commercial use and in research development Exploration of some of the numerous privacy and security implications of biometrics Also included are chapters on face and eye identification speaker recognition networking and other timely technology related issues All chapters are written by leading internationally recognized experts from academia and industry Biometrics Personal Identification in Networked Society is an invaluable work for scientists engineers application developers systems integrators

and others working in biometrics Visual Perception for Humanoid Robots David Israel González Aguirre, 2018-09-01 This book provides an overview of model based environmental visual perception for humanoid robots The visual perception of a humanoid robot creates a bidirectional bridge connecting sensor signals with internal representations of environmental objects The objective of such perception systems is to answer two fundamental questions What where is it To answer these questions using a sensor to representation bridge coordinated processes are conducted to extract and exploit cues matching robot's mental representations to physical entities These include sensor actuator modeling calibration filtering and feature extraction for state estimation This book discusses the following topics in depth Active Sensing Robust probabilistic methods for optimal high dynamic range image acquisition are suitable for use with inexpensive cameras This enables ideal sensing in arbitrary environmental conditions encountered in human centric spaces The book quantitatively shows the importance of equipping robots with dependable visual sensing Feature Extraction Recognition Parameter free edge extraction methods based on structural graphs enable the representation of geometric primitives effectively and efficiently This is done by eccentricity segmentation providing excellent recognition even on noisy low resolution images Stereoscopic vision Euclidean metric and graph shape descriptors are shown to be powerful mechanisms for difficult recognition tasks Global Self Localization Depth Uncertainty Learning Simultaneous feature matching for global localization and 6D self pose estimation are addressed by a novel geometric and probabilistic concept using intersection of Gaussian spheres The path from intuition to the closed form optimal solution determining the robot location is described including a supervised learning method for uncertainty depth modeling based on extensive ground truth training data from a motion capture system The methods and experiments are presented in self contained chapters with comparisons and the state of the art The algorithms were implemented and empirically evaluated on two humanoid robots ARMAR III A B The excellent robustness performance and derived results received an award at the IEEE conference on humanoid robots and the contributions have been utilized for numerous visual manipulation tasks with demonstration at distinguished venues such as ICRA CeBIT IAS and Automatica
