Voting and Migration Patterns in the U.S. George Hawley,2013-07-31 In recent years political scientists and journalists have taken a great interest in the question of whether the American electorate is sorting into communities based on partisan affiliation That is there is concern that American communities are becoming increasingly politically homogenous and this is because Americans are considering politics explicitly when determining where to live Academics have since debated the degree to which this is a real phenomenon and if it is whether it has important normative implications However little empirical research has examined which factors turned some closely contested counties into Republican enclaves and others into Democratic strongholds Examining individual and aggregate data and employing a large number of statistical methods George Hawley explores the increasing political homogenization of small geographic units and explains the causal mechanisms driving this phenomenon

as well as its consequences for individual political attitudes and behavior among residents residing in these geographic units. He argues that some partisans are self-selecting into communities of like-minded partisans, causing some areas to become overwhelmingly Republican and others to become overwhelmingly Democratic. The book also notes that the migratory patterns of Republicans and Democrats differ in systematic ways for other reasons due to the different demographic and economic characteristics of these partisan groups. At a time when many studies argue that a large percentage of the electorate is self-selecting into communities based on their political preferences, this bookshelf essential presents a much needed account on the different migratory patterns of Republicans and Democrats and how these patterns are shaping the geography of American politics.

U.S. Agriculture and Foreign Workers Robert D. Emerson, 1988 [Scandinavian Exodus](#)
Briant Lindsay Lowell, 2019-09-05 First published in 1987. During the last half of the nineteenth century, nearly two million Norwegians and Swedes migrated to the United States. Declining rates of emigration are moderately associated with the development of urban industrialization in Scandinavia toward the end of the 19th century. Still, the major explanation of the decline of emigration is argued to be less a response to new urban opportunities than the end result of the transformation of rural peasant classes and the decay of the diffusion process. In this volume, economic change, agricultural development, and the course of the demographic transition are separately considered to isolate the causes underlying the emigration. The social historical context is examined with an eye toward casting the results of this study in a broader light. Those lessons learned in the study of Scandinavian experience are applicable to similar processes currently unfolding in contemporary developing countries.
