Patterns, Thinking, and Cognition Howard Margolis, 1987 What happens when we think How do people make judgments While different theories abound and are heatedly debated most are based on an algorithmic model of how the brain works Howard Margolis builds a fascinating case for a theory that thinking is based on recognizing patterns and that this process is intrinsically a logical Margolis gives a Darwinian account of how pattern recognition evolved to reach human cognitive abilities Illusions of judgment standard anomalies where people consistently misjudge or misperceive what is logically implied or really present are often used in cognitive science to explore the workings of the cognitive process The explanations given for these anomalous results have generally explained only the anomaly under study and nothing more Margolis provides a provocative and systematic analysis of these illusions which explains why such anomalies exist and recur Offering empirical applications of his theory Margolis turns to historical cases to show how an individual's cognitive repertoire the available cognitive patterns and their relation to cues changes or resists changes over time Here he focuses on the change in worldview occasioned by the Copernican discovery not only how an individual might come to see things in a radically new way but how it is possible for that new view to spread and become the dominant one A reanalysis of the trial of Galileo focuses on social cognition and its interactions with politics In challenging the prevailing paradigm for understanding how the human mind works *Patterns Thinking and Cognition* is certain to stimulate fruitful debate

[The Pattern Recognition Theory of Humour](#)

still available Published in June 2008 An Outline was produced to offer people who study and work in related fields an overview of the fundamentals of Pattern Recognition Theory and its implications for understanding the role of humour in human cognitive development Its publication generated worldwide media coverage and discussion Modeling Rationality, Morality, and Evolution Peter Danielson, 1998-10-29 This collection focuses on questions that arise when morality is considered from the perspective of recent work on rational choice and evolution Linking questions like Is it rational to be moral to the evolution of cooperation in The Prisoners Dilemma the book brings together new work using models from game theory evolutionary biology and cognitive science as well as from philosophical analysis Among the contributors are leading figures in these fields including David Gauthier Paul M Churchland Brian Skyrms Ronald de Sousa and Elliot Sober *How Economics Forgot History* Geoffrey M Hodgson, 2001-08-23 In arguably his most important book to date Hodgson calls into question the tendency of economic method to try and explain all economic phenomena by using the same catch all theories and dealing in universal truths He argues that you need different theories to analyze different economic phenomena and systems and that historical context must be taken into account

Paradigms and Barriers Howard Margolis, 1993-08-15 In *Paradigms and Barriers* Howard Margolis offers an innovative interpretation of Thomas S Kuhn's landmark idea of paradigm shifts applying insights from cognitive psychology to the history and philosophy of science Building upon the arguments in his acclaimed *Patterns Thinking and Cognition* Margolis suggests that the breaking down of particular habits of mind or critical barriers is key to understanding the processes through which one model or concept is supplanted by another Margolis focuses on those revolutionary paradigm shifts such as the switch from a Ptolemaic to a Copernican worldview where challenges to entrenched habits of mind are marked by incomprehension or indifference to a new paradigm Margolis argues that the critical problem for a revolutionary shift in thinking lies in the robustness of the habits of mind that reject the new ideas relative to the habits of mind that accept the new ideas Margolis applies his theory to famous cases in the history of science offering detailed explanations for the transition from Ptolemaic to cosmological astronomy the emergence of probability the overthrow of phlogiston and the emergence of the central role of experiment in the seventeenth century He in turn uses these historical examples to address larger issues especially the nature of belief formation and contemporary debates about the nature of science and the evolution of scientific ideas Howard Margolis is a professor in the Harris Graduate School of Public Policy Studies and in the College at the University of Chicago He is the author of *Selfishness Altruism and Rationality* and *Patterns Thinking and Cognition* both published by the University of Chicago Press

Thinking Through Dilemmas Lawrence H. Williams, 2020-09-13 Departing from the sociological dual process model that divides thoughts into automatic and unconscious or deliberate and conscious occurrences this book draws on empirical cases to demonstrate the existence of automatic deliberation Through research into the ways in which people address difficult subjects such as death and dying pedophilia and career decision making the author sheds light on a mode of thinking which is both habitual and effortful displaying a combination of habituated understandings and conscious deliberation Advancing a blended view of cognition by which individuals draw on schemas and frames to think through complex topics this volume will appeal to sociologists and psychologists with interests in cognition and the ways in which we make decisions

Primary Process Thinking Robert R. Holt, 2008-12-19 Volume one of this comprehensive approach to one of Freud's most important conceptual achievements the theory of thinking examines the emergence and changes in his conceptions of primary and secondary process thought in their theoretical and clinical contexts Unlike most treatments which emphasize their embeddedness in metapsychology the text demonstrates the empirical grounding of these concepts in observation and describes how it led to a method of quantitative measurement A summary of major theoretically relevant findings with that method plus a critical review of post Freudian reexaminations of primary process leads to a reformulation of the psychoanalytic theory of thinking that is in Rubinstein's term protoneurophysiological as consistent as possible with contemporary knowledge in the brain sciences In so doing the author attempts to convert a psychoanalytic theory into a set of testable propositions using objectively quantifiable scientific concepts Moreover he shows how data obtained with his method can be used to confront the theoretical propositions verifying some rejecting some and significantly modifying others Volume two is an enclosed compact disc The first ten chapters constitute a detailed scoring manual designed to be self teaching for applying the concepts of primary process its controls and defenses to data from the Rorschach and Thematic Apperception Tests dreams and free verbal data The remaining chapters treat its reliability and validity including a critical summary of over one hundred researches from around the world demonstrating how it can be used not only to test psychoanalytic propositions but to illuminate issues in clinical psychiatry clinical and developmental psychology and personality A concluding chapter points to many promising directions for further research

Rationalist Bias in Communication Theory
Shedletsky, Leonard, 2021-06-04 While communication theory has not recognized the implications of the social intuitionist model psychologists have gathered an impressive body of evidence to support the theory In social cognition research there was the idea that human inferential processes are conscious rational logical and accurate and this belief continues somewhat in the behavioral sciences although there is evidence that it is incorrect A fresh examination is needed on just how these inferences by the receiver and the implications by the sender carried out at high speed impact our understanding of the communication process Simply put until now the default case in communication theory is the belief that we consciously reason and then we act However that may not be entirely true Rationalist Bias in Communication Theory applies social intuition theory to human communication This book explores how research has missed accounting for a critical fact about human communication in the theories of communication namely that we as humans can respond to one another and to all kinds of stimuli faster than we can deliberate By applying intuitive cognition to communication a new light can be shed on the communication process which is what the chapters prove and discuss This book is valuable for social scientists practitioners researchers academicians and students interested in new theories in communication theory

A Theory of Contract Law Peter A. Alces, 2011-04-07 In the past few decades scholars have offered positive normative and most recently interpretive theories of contract law These theories have proceeded primarily indeed necessarily from deontological and consequentialist premises In *A Theory of Contract Law* Empirical Insights and Moral Psychology Professor Peter A Alces confronts the leading interpretive theories of contract and demonstrates their doctrinal failures Professor Alces presents the leading canonical cases that inform the extant theories of Contract law in both their historical and transactional contexts and argues that moral psychology provides a better explanation for the contract doctrine than do alternative comprehensive interpretive approaches
