

clinical research and case-study. The clinician or student interested in specific details of procedures or studies reviewed must go beyond this book, however, as the book is intended primarily as a review and evaluation of the field as it currently stands.

With the continuing emergence of psychological approaches to pain-management, the objective assessment of pain is becoming of vital importance to many clinicians, and while many of the procedures reviewed in this book are in need of refinement, this text is an excellent introduction to the methods currently available, while also pointing to problems inherent in the field, and to areas in need of further research.

Neurosis and the Social Environment

S. Henderson, D. G. Byrne, P. Duncan-Jones, Sydney: Academic Press, 1981, pp. 279, \$32.50.

This book is an account of an epidemiological study of neurosis. The study involves an examination of the relations between neurosis, deficiencies in social bonds, and the occurrence of adverse life experiences. A large scale prevalence study ($n = 756$), and a longitudinal study ($n = 220$) are presented. The authors conclude that the perceived adequacy of social relationships, rather than deficiencies in availability of relationships, is associated with the onset of symptoms in individuals who experience adverse life events. The book includes an extensive review of the literature on social bonding and the measurement of adverse life events. It also contains valuable data on devices such as the Present State Examination, Zung Self-Rating Depression Scale and the General Health Questionnaire. Other researchers may also be interested in the very detailed presentation of devices for the assessment of social relationships and life events which are contained in the appendix.

Overall, this is a book which will be primarily of interest to researchers in psychiatry and psychology, especially those who work in the area of anxiety, depression and social behaviour.
