descriptions of detectors focus on the what and not the why This volume aims to elucidate how the requirements of the physics at the Large Hadron Collider LHC define the detector environment In turn the detector choices are made to adopt to that environment The goal of LHC physics is to explore the mechanism for electroweak symmetry breaking Because of the minuscule cross sections which need to be explored 0.1 fb the LHC needs to provide 100 fb⁻¹ yr or an instantaneous luminosity of 10³⁴ cm⁻² sec With a bunch crossing interval of 25 nsec well matched to detector speeds there will be 25 events occupying each bunch crossing Thus the physics requires fast finely segmented low noise and radiation resistant detectors which provide redundant measurements of the rarely produced electrons and muons To achieve those goals new ground was broken in constructing the A Toroidal LHC Apparatus ATLAS and Compact Muon Solenoid CMS detectors in the vertex detectors tracking systems calorimetry strong magnets muon systems front end electronics trigger systems and in the data acquisition methods used
