Public Reactions To Nuclear Waste Citizens Views Of Repository Siting:

Public Reactions to Nuclear Waste Riley E. Dunlap, Michael E. Kraft, Eugene A. Rosa, 1993 Nuclear waste is going nowhere and neither is the debate over its disposal The problem growing every day has proven intractable with policymakers on one side armed with daunting technical data and the public on the other declaring not in my backyard This timely volume offers a look past our present impasse into the nature and roots of public viewpoints on nuclear waste disposal A much needed supplement to the largely technical literature on this problem the book provides extensive studies of the reaction of citizens whether rural or urban near site residents or prospective visitors to proposed nuclear waste sites around the nation particularly Nevada s Yucca Mountain Conducted by distinguished sociologists psychologists political scientists and economists these studies constitute the most comprehensive account available of the impact of public perceptions and opinions on the nuclear waste policy process in the United States As such the collection will clarify the politics of nuclear waste siting and will give impetus to the stalled debate over the issue Contributors Rodney K Baxter Julia G Brody Bruce Clary Lori Cramer William H Desvousges Riley E Dunlap Douglas Easterling Judy K Fleishman James Flynn William R Freudenburg Michael E Kraft Richard S Krannich Howard Kunreuther Mark Layman Ronald L Little Robert Cameron Mitchell Alvin H Mushkatel Joanne M Nigg K David Pijawka Eugene A Rosa Paul Slovic Yucca Mountain Site Characterization Project Bibliography, 1994-1995, 1996 *Geological Disposal of Carbon Dioxide and Radioactive Waste: A Comparative Assessment* Ferenc L. Toth, 2011-02-21 Fossil fuels will remain the backbone of the global energy economy for the foreseeable future The contribution of nuclear energy to the global energy supply is also expected to increase With the pressing need to mitigate climate change and reduce greenhouse gas emissions the fossil energy industry is exploring the possibility of carbon dioxide disposal in geological media Geological disposal has been studied for decades by the nuclear industry with a view to ensuring the safe containment of its wastes Geological disposal of carbon dioxide and that of radioactive waste gives rise to many common concerns in domains ranging from geology to public acceptance In this respect comparative assessments reveal many similarities ranging from the transformation of the geological environment and safety and monitoring concerns to regulatory liability and public acceptance issues However there are profound differences on a broad range of issues as well such as the quantities and hazardous features of the materials to be disposed of the characteristics of the targeted geological media the site engineering technologies involved and the timescales required for safe containment at the disposal location There are ample opportunities to learn from comparisons and to derive insights that will assist policymakers responsible for national energy strategies and international climate policies **Nuclear Waste Management in a Globalised World** Urban Strandberg, Mats Andrén, 2013-09-13 High level nuclear waste HLW is a controversial and risky issue For the next 100 years the HLW will be subject to policy decisions and value assessments Physically safe technologically stable and socio economically sustainable HLW management will top the agenda That must be

accomplished in a society whose segments are both stable and in a rapid state of flux under the influence of global as well as national factors private interests as well as the vagaries of national politics Among the challenges to be faced is how to codify responsibilities of nuclear industry governments and international organisations and any adopted management policy must attain legitimacy at the local national regional and global levels All such considerations raise questions about the practical and theoretical knowledge This special issue book will address these questions by exploring HLW management in Canada France Germany India Sweden the UK and the USA Special emphasis will be placed on highlighting national context current trends and uncertainties with relevance to a socially sustainable contemporary and future HLW management **Risk,**

Media and Stigma Paul Slovic, 2013-11-05 The benefits of modern technology often involve health safety and environmental risks that produce public suspicion of technologies and aversion to certain products and substances Amplified by the pervasive power of the media public concern about health and ecological risks can have enormous economic and social impacts such as the stigmatization experienced in recent years with nuclear power British beef and genetically modified plants This volume presents the most current and comprehensive examination of how and why stigma occurs and what the appropriate responses to it should be to inform the public and reduce undesirable impacts Each form of stigma is thoroughly explored through a range of case studies Theoretical contributions look at the roles played by government and business and the crucial impact of the media in forming public attitudes Stigma is not always misplaced and the authors discuss the challenges involved in managing risk and reducing the vulnerability of important products industries and institutions while providing the public with the relevant information they need about risks *Contaminated Communities* Michael

Edelstein, 2018-10-08 In this wholly revised second edition Michael Edelstein draws on his thirty years as a community activist to provide a much expanded theoretical foundation for understanding the psychosocial impacts of toxic contamination Informed by social psychological theory and an extensive survey of documented cases of toxic exposure and enlivened by excerpts drawn from more than one thousand Interviews with victims *Contaminated Communities* Second Edition presents a candid portrayal of the toxic victim's experience and the key stages in the course of toxic disaster The second edition introduces dozens of new cases and provides expanded considerations of environmental justice environmental racism environmental turbulence and environmental stigma as well as a fully articulated theory of lifescape The new edition moves past the well charted role of reactive environmentalism to explore issues for a proactivist approach that employs a third path of social learning sustainable innovation consensus building and community empowerment **Structural Human Ecology**

Nadine Bratchatzek, Paul Ehrlich, Sylvia Hiller, Roger E. Kasperson, Sandra T. Marquart-Pyatt, Allan Mazur, Ortwin Renn, Dirk Scheer, 2021-09-24 The desire to understand people's influence on ecosystems has inspired scientific studies and analyses of the stress individuals and communities place on the environment human well being and the tradeoffs between them As an emerging discipline Structural Human Ecology is devoted to unlocking the dynamic links between population environment

social organization and technology The new field offers cutting edge research in risk analysis that can be used to evaluate environmental policies and thus help citizens and societies worldwide learn how to most effectively mitigate human impacts on the biosphere The essays in this volume were presented by leading international scholars at a 2011 symposium honoring the late Dr Eugene Rosa then Boeing Distinguished Professor of Environmental Sociology at WSU

Hazardous Wastes in Rural America Steve H. Murdock, 1999 Based on the most comprehensive multi site and multi dimensional study completed to date on waste facility siting and management in rural areas in the U S Hazardous Wastes in Rural America establishes the impacts of waste facilities for a range of rural communities that have experienced alternative stages of waste facility siting and operation process

UK Environmental Policy in the 1990s Tim S. Gray, 2016-07-27 The central controversy running through this book is whether Mrs Thatcher s famous green speeches of 1988 marked a fundamental shift by the Conservative Government towards environmentalism or whether they were merely political rhetoric designed to rule out a temporary surge of popular support for the Green Party The conclusion arrived at is mixed in some policy areas a definite shift has occurred but in others it is business as usual An overall change of gear is still awaited

Improving the Regulation and Management of Low-Activity Radioactive Wastes National

Research Council, Division on Earth and Life Studies, Nuclear and Radiation Studies Board, Committee on Improving Practices for Regulating and Managing Low-Activity Radioactive Waste, 2006-04-24 The largest volumes of radioactive wastes in the United States contain only small amounts of radioactive material These low activity wastes LAW come from hospitals utilities research institutions and defense installations where nuclear material is used Millions of cubic feet of LAW also arise every year from non nuclear enterprises such as mining and water treatment While LAW present much less of a radiation hazard than spent nuclear fuel or high level radioactive wastes they can cause health risks if controlled improperly Improving the Regulation and Management of Low Activity Radioactive Wastes asserts that LAW should be regulated and managed according to the degree of risk they pose for treatment storage and disposal Current regulations are based primarily on the type of industry that produced the waste the waste's origin rather than its risk In this report a risk informed approach for regulating and managing all types of LAW in the United States is proposed Implemented in a gradual or stepwise fashion this approach combines scientific risk assessment with public values and perceptions It focuses on the hazardous properties of the waste in question and how they compare with other waste materials The approach is based on established principles for risk informed decision making current risk informed initiatives by waste regulators in the United States and abroad solutions available under current regulatory authorities and remedies through new legislation when necessary

Review of New York State Low-Level Radioactive Waste Siting Process Committee to Review New York State's Siting and Methodology Selection for Low-Level Radioactive Waste Disposal, National Research Council, 1996-08-13 This book reviews the efforts of New York state to site a low level radioactive waste disposal facility It evaluates the nature sources and quality of the data analyses and procedures used by the New York State Siting Commission in its decisionmaking process which identified five potential sites for low level waste disposal Finally the committee offers a chapter highlighting the lessons in siting low level radioactive waste facilities that can be learned from New York State's experience

Decision Making for Complex Socio-Technical Systems Thomas Flüeler, 2006-03-08 Waste management can be considered as a mirror of society In its our fluctuating definition besides conserving a supply of valuable materials and resources it acts as a fascinating expression for our throw away mentality Waste is inevitable but it nevertheless provides an opportunity a need and an incentive for society to pursue a more careful management of it If this is successfully carried out society may well find it possible to manage itself in an overall more careful and universal way The management or governance of radioactive waste particularly is determined by a complex constellation of individuals social aggregates and institutions A wealth of interconnected parts forms a complex and volatile system that is highly technical and explosively political in nature The problems inherent in this system must be managed so as to reach a safe acceptable responsible feasible and sustainable solution It is a system with an objective long term dimension with a hazard potential of in part hundreds of thousands of years and it has a long term institutional dimension insofar as its implementation must last for decades The very notion of risk extends from the long life

of radionuclides over the perception of dread to the decisional risk of whether when and how to implement an agreed upon solution

Decision-making and Radioactive Waste Disposal Andrew Newman, Gerry Nagtzaam, 2015-11-19 The International Atomic Energy Agency estimates that nuclear power generation facilities produce about 200 000 cubic meters of low and intermediate level waste each year Vital medical procedures industrial processes and basic science research also produce significant quantities of waste All of this waste must be shielded from the population for extended periods of time Finding suitable locations for disposal facilities is beset by two main problems community responses to siting proposals are generally antagonistic and as a result governments have tended to be reactive in their policy making Decision making and Radioactive Waste Disposal explores these issues utilizing a linear narrative case study approach that critically examines key stakeholder interactions in order to explain how siting decisions for low level waste disposal are made Five countries are featured the US Australia Spain South Korea and Switzerland This book seeks to establish an understanding of the political economic environmental legal and social dimensions of siting across those countries This valuable resource fills a gap in the literature and provides recommendations for future disposal facility siting efforts The book will be of interest to students and scholars of environmental law justice management politics energy and security policy as well as decision makers in government and industry

Nuclear Energy David Bodansky, 2007-06-25 This second edition represents an extensive revision of the first edition though the motivation for the book and the intended audiences as described in the previous preface remain the same The overall length has been increased substantially with revised or expanded discussions of a number of topics including Yucca Mountain repository plans new reactor designs health effects of radiation costs of electricity and dangers from terrorism and weapons proliferation The overall status of nuclear power has changed rather little over the past eight years Nuclear reactor construction remains at a very low ebb in much of the world with the exception of Asia while nuclear power's share of the electricity supply continues to be about 75% in France and 20% in the United States However there are signs of a heightened interest in considering possible nuclear growth In the late 1990s the U S Department of Energy began new programs to stimulate research and planning for future reactors and many candidate designs are now contending at least on paper to be the next generation leaders Outside the United States the commercial development of the Pebble Bed Modular Reactor is being pursued in South Africa a French German consortium has won an order from Finland for the long planned EPR European Pressurized Water Reactor and new reactors have been built or planned in Asia In an unanticipated positive development for nuclear energy the capacity factor of U S reactors has increased dramatically in recent years and most operating reactors now appear headed for 20 year license renewals

The Perception of Risk Paul Slovic, 2016-10-06 The concept of risk is an outgrowth of our society's great concern about coping with the dangers of modern life The Perception of Risk brings together the work of Paul Slovic one of the world's leading analysts of risk risk perception and risk management to examine the gap between expert views of risk and public perceptions Ordered

chronologically it allows the reader to see the evolution of our understanding of such perceptions from early studies identifying public misconceptions of risk to recent work that recognizes the importance and legitimacy of equity trust power and other value laden issues underlying public concern *Federal Environmental Research* United States. Congress. House. Committee on Science, Space, and Technology, 1994

The Social Amplification of Risk Nick Pidgeon, Roger E. Kasperson, Paul Slovic, 2003-07-10 This volume edited by three of the world's leading analysts of risk and its communication brings together contributions from a group of international experts working in the field of risk perception and risk communication Key conceptual issues are discussed as well as a range of recent case studies spanning BSE and food safety AIDS HIV nuclear power child protection Y2K electromagnetic fields and waste incineration that take forward the state of the art in risk amplification theory The volume also draws attention to lessons for public policy risk management and risk communication practice

Disposition of High-Level Waste and Spent Nuclear Fuel National Research Council, Division on Earth and Life Studies, Board on Radioactive Waste Management, Committee on Disposition of High-Level Radioactive Waste Through Geological Isolation, 2001-07-05 Focused attention by world leaders is needed to address the substantial challenges posed by disposal of spent nuclear fuel from reactors and high level radioactive waste from processing such fuel The biggest challenges in achieving safe and secure storage and permanent waste disposal are societal although technical challenges remain Disposition of radioactive wastes in a deep geological repository is a sound approach as long as it progresses through a stepwise decision making process that takes advantage of technical advances public participation and international cooperation Written for concerned citizens as well as policymakers this book was sponsored by the U S Department of Energy U S Nuclear Regulatory Commission and waste management organizations in eight other countries
