For some a sense of place is about travel about plunging oneself into new settings For others it is about being and knowing home This book is a collection of essays memoirs nature writing and travel narratives that document the impact this sense of place has on writing In locations as familiar as Cape Cod or Mesa Verde and as exotic as Krak w or Kyrgyzstan thirteen accomplished writers of contemporary creative nonfiction share some of their most memorable work disclosing how place alters our perception and influences our insight Taking readers to deserts and forests islands and mountains Landscapes with Figures is an encounter not only with places but also with writers themselves Each contribution is accompanied by an author s commentary that discusses the relationship to place in his or her writing The authors reveal the connections they feel to the places they write about the role that place plays in the choices they make in relating their experiences and the strategies and work habits that produce such writing This compilation is at once a wide ranging anthology of the nonfiction of place for the armchair traveler and a book about writing for those who aspire to understand and practice the craft carrying with it the invitation to reflect on one s own special places The Aquatic Birds of Great Britain and Ireland Charles Joseph

Patten,1906 **Reptiles and Birds: A Popular Account of Their Various Orders, With a Description of the Habits and Economy of the Most Interesting** Louis Figuier,2020-09-28 There is little apparent resemblance between the elegant feathered warbler which makes the woods re echo to its cheerful song and the crawling reptile which is apt to inspire feelings of disgust when the more potent sensation of terror is absent between the familiar Swallow which builds its house of clay under the eaves of your roof or the warbler whose nest with its young progeny carefully watched by the father of the brood in the silent watches of the night is now threatened by the Serpent which has glided so silently into the bush its huge mouth already open to swallow the whole family while the despairing and fascinated parents have nothing but their slender

bills to oppose to their formidable foe Placed side by side says Professor Huxley a Humming bird and a Tortoise or an Ostrich and a Crocodile offer the strongest contrast and a Stork seems to have little but its animality in common with the Snake which it swallows Nevertheless unlike as they are in outward appearance there is sufficient resemblance in their internal economy to bring them together in most attempts at a classification of the Animal Kingdom The air bladder which exists between the digestive canal and kidneys in some fishes becomes vascular with the form and cellular structure of lungs in reptiles the heart has two auricles the ventricle in most is imperfectly divided and more or less of the venous blood is mixed with the arterial which circulates over the body but retaining their gills and being therefore transitional in structure they are also cold blooded In birds the lungs are spongy the cavity of the air bags becoming obliterated by the multiplication of vascular cellules the heart is four chambered transmitting venous blood to the lungs and pure arterial blood to the body the temperature is raised and maintained at 90 to 100 Fahr Thus Reptiles like Birds breathe the common air by means of their lungs but respiration is much less active Although remarks Professor Owen the heart of Birds resembles in some particulars that of Reptiles the four cavities are as distinct as in the Mammalia but they are relatively stronger their valvular mechanism is more perfect and the contractions of this organ are more forcible and frequent in birds in accordance with their more extended respiration and their more energetic muscular action It is true as Professor Huxley informs us that the pinion of a bird which corresponds with the human hand or the fore paw of a reptile has three points representing three fingers no reptile has so few 1 The breast bone of a bird is converted into membrane bone no such conversion takes place in reptiles The sacrum is formed by a number of caudal and dorsal vertebr In reptiles the organ is constituted by one or two sacral vertebr
