Biomedical Index to PHS-supported Research, 1992

Muller's Diseases of the Lung Kyung Soo Lee, Tomás Franquet, Joungho Han, Takeshi Johkoh, 2012-01-19 This text presents a detailed overview of the principal radiologic and pathologic findings of the most common pulmonary diseases. Its primary radiologic emphasis is on the appearance of the diseases and abnormalities. The goal is to offer the radiologist a greater appreciation of the patterns and distribution of the histopathologic abnormalities as shown on the imaging studies and the pulmonary pathologist better understanding of the radiologic findings. The text features radiologic pathologic correlation throughout and a strong emphasis on high resolution CT which generally provides the best depiction of anatomic features. Reviewers praised the concise and succinct narrative style of the first edition.

Airborne Hazards Related to Deployment Coleen P. Baird, Deanna K. Harkins, Borden Institute (U.S.), 2015 NOTE NO FURTHER DISCOUNT FOR THIS PRINT PRODUCT OVERSTOCK SALE Significantly reduced list price. Developed from the Airborne Hazards Symposium held in Washington DC in August 2012, this book covers diagnosis and workup of symptomatic individuals, exposure characterization, current epidemiology, the potential role of pulmonary function testing, spirometry in surveillance, strategic research planning, clinical follow up and registries, risk communication etc. Symposium presentations were delivered by a diverse group of scientific experts and contain valuable veteran perspectives. This book represents a compendium of what is currently known regarding the potential long term health consequences of exposure to airborne hazards during Operation Enduring Freedom, Operation Iraqi Freedom and Operation New Dawn deployments. *Airborne Hazards Related to Deployment* presents a balanced comprehensive approach to furthering the understanding of airborne hazards during deployments and other military operations, ultimately improving airborne hazard prevention, protection and avoidance while improving healthcare and minimizing adverse health outcomes of our service members and veterans.

Pulmonary Heart Disease L.J. Rubin, 2012-12-06 Responsibility for the diagnosis and management of disorders of the pulmonary circulation has become the shared domain of the pulmonologist, cardiologist, surgeon, radiologist, pathologist and perhaps most important of all the internist. It is the general internist who is most likely to care for the majority of patients with lung diseases that secondarily give rise to pulmonary heart disease and it is the internist who will first evaluate the patient with primary pulmonary hypertension or recurrent pulmonary thromboembolism who presents with nonspecific complaints and may manifest subtle

and nondiagnostic findings on preliminary evaluation The burgeoning medical literature concerning aspects of the pulmonary circulation both clinical and investigative is a reflection of the reawakening of great interest in this field and has led to many new developments both in our understanding of cardiopulmonary pathophysiology and in the diagnosis and treatment of pulmonary vascular diseases This book is an attempt to provide the clinician with a comprehensive overview of pulmonary heart disease from the perspective of experts representing a variety of disciplines It is intended to be thorough yet clinically relevant Individuals familiar with some facets of pulmonary heart disease may gain insight into other aspects of this condition whereas those unfamiliar with this disorder may find this work useful as a general reference or as a resource to address a specific question
