problems of information scientists using information to study information It is the author's contention that information use problems are in certain instances insoluble dilemmas for they are grounded in human nature and can be solved only by altering that nature Neill analyzes certain events to show that while sufficient information was available it wasn't used either because of greed personality or judgement Information is power if and only if you have enough knowledge to understand it the will to use it and the ability to communicate it The dilemmas are found in the control of information for retrieval the use of data originally collected for other purposes and research methods in library and information science     *Stacking the coffins* Ida Milne, 2018-05-22 The 1918-19 influenza epidemic killed more than 50 million people and infected between one fifth and half of the world's population It is the world's greatest killing influenza pandemic and is used as a worst case scenario for emerging infectious disease epidemics like the corona virus COVID-19 It decimated families silenced cities and towns as it passed through stilled commerce closed schools and public buildings and put normal life on hold Sometimes it killed several members of the same family Like COVID-19 there was no preventative vaccine for the virus and many died from secondary bacterial pneumonia in this pre antibiotic era In this work Ida Milne tells how it impacted on Ireland during a time of war and revolution But the stories she tells of the harrowing impact on families and of medicine's desperate search to heal the ill could apply to any other place in the world at the time     **The Deadly Truth** Gerald N. Grob, 2009-07 The Deadly Truth chronicles the complex interactions between disease and the peoples of America from the pre-Columbian world to the present Grob's ultimate lesson is stark but valuable there can be no final victory over disease The world in which we live undergoes constant change which in turn creates novel risks to human health and life We conquer particular diseases but others always arise in their stead In a powerful challenge to our tendency to see disease as unnatural and its virtual elimination as a real possibility Grob asserts the undeniable biological persistence of disease Diseases ranging from malaria to cancer have shaped the social landscape sometimes through brief furious outbreaks and at other times through gradual occurrence control and recurrence Grob integrates statistical data with particular peoples and places while giving us the larger patterns of the ebb and flow of disease over centuries Throughout we see how much of our history culture and nation building was determined in ways we often don't realize by the environment and the diseases it fostered The way in which we live has shaped and will continue to shape the diseases from which we get sick and die By accepting the presence of disease and understanding the way in which it has physically interacted with people and places in past eras Grob illuminates the extraordinarily complex forces that shape our morbidity and mortality patterns and provides a realistic appreciation of the individual social environmental and biological determinants of human health     [The Panic Virus](#) Seth Mnookin, 2012-01-03 A searing account of how vaccine opponents have used the media to spread their message of panic despite no scientific evidence to support them
