Radiation Damage In Semiconductors Proc:

Radiation Effects in Advanced Semiconductor Materials and Devices C. Claeys, E. Simoen, 2013-11-11 In the modern semiconductor industry there is a growing need to understand and combat potential radiation damage problems. Space applications are an obvious case but beyond that today's device and circuit fabrication rely on increasing numbers of processing steps that involve an aggressive environment where inadvertent radiation damage can occur. This book is both aimed at post graduate researchers seeking an overview of the field and will also be immensely useful for nuclear and space engineers and even process engineers. A background knowledge of semiconductor and device physics is assumed but the basic concepts are all briefly summarized. Finally the book outlines the shortcomings of present experimental and modeling techniques and gives an outlook on future developments.

Ionizing Radiation Effects in MOS Devices and Circuits T. P. Ma, Paul V. Dressendorfer, 1989-04-18 The first comprehensive overview describing the effects of ionizing radiation on MOS devices as well as how to design, fabricate and test integrated circuits intended for use in a radiation environment. Also addresses process induced radiation effects in the fabrication of high density circuits. Reviews the history of radiation hard technology providing background information for those new to the field. Includes a comprehensive review of the literature and an annotated listing of research activities in radiation hardness research.

Physics of Radiation Effects in Crystals R.A. Johnson, A.N. Orlov, 2012-12-02 Physics of Radiation Effects in Crystals is presented in two parts. The first part covers the general background and theory of radiation effects in crystals including the theory describing the generation of crystal lattice defects by radiation, the kinetic approach to the study of the disposition of these defects and the effects of the diffusion of these defects on alloy compositions and phases. Specific problems of current interest are treated in the second part and include anisotropic dimensional changes in uranium, zirconium and graphite, acceleration of thermal creep in reactor materials and radiation damage of semiconductors and superconductors.

Laboratory,1965 *New Insulators Devices and Radiation Effects* ,1999-02-11 Silicon technology today forms the basis of a world wide multi billion dollar component industry The reason for this expansion can be found not only in the physical properties of silicon but also in the unique properties of the silicon silicon dioxide interface However silicon devices are still subject to undesired electrical phenomena called instabilities These are due mostly to the imperfect nature of the insulators used to the not so perfect silicon insulator interface and to the generation of defects and ionization phenomena caused by radiation The problem of instabilities is addressed in this volume the third of this book series Vol 3 updates and supplements the material presented in the previous two volumes and devotes five chapters to the problems of radiation matter and radiation device interactions The volume will aid circuit manufacturers and circuit users alike to relate unstable electrical parameters and characteristics to the presence of physical defects and impurities or to the radiation environment which caused them **Physics Of Semiconductors, The - Proceedings Of The Xxi International Conference (In 2 Volumes)** Ping Jiang,Hou-zhi Zheng,1993-03-31 The 21st conference proceedings continue the tradition of the ICPS series The proceedings cover all aspects of semiconductor physics including those related to materials processing and devices Plenary and invited speakers address areas of major interest
