Radiation Research E. M. Fielden, 1987 **Radiation Research**, 1987 **Radiation Oncology: Radiobiological and Physiological Perspectives** H. Awwad, 2013-03-09 During the past four decades knowledge about biological effects of ionizing radiations on mammalian cells normal tissues and tumours has increased enormously and has enabled radiotherapists to obtain a better insight into the advantages and disadvantages of cancer treatments with modified regimens of irradiations and combinations with chemotherapeutic agents Even for the older scientists and clinicians who have witnessed all these developments and have contributed to the vast amount of information it is difficult to integrate this knowledge and to apply it in their daily work For younger workers it is often difficult to select the important main concepts and results from the overwhelming number of publications It is evident that a book which provides an integrated view of basic and applied radiation oncology can be of great value to students scientists and most importantly to clinicians who can devote only part of their time to the task of understanding the radiobiological background of their application of radiation in cancer treatment This book Radiation Oncology is written by a radiotherapist who has for a long time participated in the integration of basic knowledge and clinical experience He has selected radiobiological information which is considered important to radiotherapy and in the description and interpretation of normal tissue tolerance and tumour eradication probability he illustrates how basic knowledge can be applied clinically **Physical and Chemical Mechanisms in Molecular Radiation Biology** William A. Glass, Matesh N. Varma, 2012-12-06 The fundamental understanding of the production of biological effects by ionizing radiation may well be one of the most important scientific objectives of mankind such understanding could lead to the effective and safe utilization of the nuclear energy option In addition this knowledge will be of immense value in such diverse fields as radiation therapy and diagnosis and in the space program To achieve the above stated objective the U S Department of Energy DOE and its predecessors embarked upon a fundamental interdisciplinary research program some 35 years ago A critical component of this program is the Radiological and Chemical

Physics Program RCPP When the RCPP was established there was very little basic knowledge in the fields of physics chemistry and biology that could be directly applied to understanding the effects of radiation on biological systems Progress of the RCPP program in its first 15 years was documented in the proceedings of a conference held at Airlie Virginia in 1972 At this conference it was clear that considerable progress had been made in research on the physical and chemical processes in well characterized systems that could be used to understand biological effects During this period of time most physical knowledge was obtained for the gas phase because the technology and instrumentation had not progressed to the point that measurements could be made in liquids more characteristic of biological materials NASA Technical Memorandum ,1991 Environmental Radiation Effects on Mammals Olga A. Smirnova,2016-10-14 Dr Smirnova's updated text is devoted to the theoretical studies of radiation effects on mammals It summarizes 35 years of results the author obtained from analyzing dose rate equivalents for the Galactic Cosmic Rays GCR and for Solar Particles Events SPE This edition also includes two new chapters on skin epidermal epithelium and risk assessment for myeloid leukemia as well as extended revisions addressing the radiation effects on the blood forming system Mathematical models are used to explain the effects of both acute and chronic irradiation on the dynamics of vital body systems like the hematopoietic system the development of autoimmune diseases and the mortality dynamics in homogeneous and nonhomogeneous mammalian populations The proposed methodology of these studies the models themselves and the obtained results are of a great theoretical significance and can find wide practical use **Radiation Health Research, 1986 - 1990** ,1991 **Health Effects of Exposure to Low Levels of Ionizing Radiation** National Research Council,Division on Earth and Life Studies,Commission on Life Sciences,Committee on the Biological Effects of Ionizing Radiation (BEIR V),1990-02-01 This book reevaluates the health risks of ionizing radiation in light of data that have become available since the 1980 report on this subject was published The data include new much more reliable dose estimates for the A bomb survivors the results of an additional 14 years of follow up of the survivors for cancer mortality recent results of follow up studies of persons irradiated for medical purposes and results of relevant experiments with laboratory animals and cultured cells It analyzes the data in terms of risk estimates for specific organs in relation to dose and time after exposure and compares radiation effects between Japanese and Western populations **H.R. 3236 and H.R. 4458, Bills Affecting Veterans Exposed to Ionizing Radiation in Military Service** United States. Congress. House. Committee on Veterans' Affairs. Subcommittee on Compensation, Pension, and Insurance,1992 *Cyclotrons And Their Applications - Proceedings Of The13th International Conference, Vancouver, 1992* G Dutton,M K Craddock,1993-01-08 This volume describes the latest developments in the design construction and operation of cyclotrons from compact machines producing intense beams for isotope production cancer therapy and industrial use to the larger versions giving higher energy beams of ions of various elements for nuclear and particle physics Important topics include ECR ion sources superconducting magnets and radiofrequency cavities beam

dynamics and diagnostics beam cooling rings control systems and various medical and industrial applications Current Catalog National Library of Medicine (U.S.),1985 First multi year cumulation covers six years 1965 70 *International Journal of Radiation Biology* ,1995 **Nuclear Science Applications** Se Yosh Maruyama,Yuji Maruyama,1991 **Energy Meetings** United States. Honn, Lawrence J. Marnett, Santosh Nigam, Thomas Walden Jr., 2012-12-06 This volume contains the proceedings of the First International Conference on Eicosanoids and Other Bioactive Lipids in Cancer and Radiation Injury held in Detroit Michigan on October 11 14 1989 The program consisted of 83 oral and 29 poster presentations 74 of which are included in these proceedings The major sponsors of the conference were the Armed Forces Radiobiology Research Institute located in Bethesda Maryland the Radiation Oncology Research and Development Center of the Gershenson Radiation Oncology Center Harper Hospital in Detroit Michigan and Schering AG of West Germany Eighteen other organizations provided additional support The conference was unique in its attempt to link the eicosanoid and lipid researchers in the radiobiology and cancer disciplines The diverse roles that eicosanoids and other bioactive lipids play in these biological phenomena including the participation of lipid oxidation in conversion of procarcinogens positive and negative modulation of tumor growth immunomodulation tissue injury and yet protection and enhancement of cancer therapy necessitated scientific interaction to sort out and understand these complex and sometimes contradictory observations The success of this effort is reflected not only through these proceedings but also through the decision to continue the conference series with a second meeting to be held in Berlin between September 17 21 1991 *International Journal of Radiation Biology and Related Studies in Physics, Chemistry and Medicine* ,1991 DNA Damage and Repair A. Castellani, 2013-03-09 The First International Congress on DNA Damage and Repair was held in Rome Italy July 12 17 1987 It was organized by the Italian Commission for Nuclear Alternative Energy Sources The subject of DNA damage and repair involves almost all the fields of biological sciences Some of the more prominent ones include carcinogenesis photobiology radiation biology aging enzymology genetics and molecular biology These individual fields have their own international meetings and although the meetings often have sessions devoted to DNA repair they do not bring together a wide diversity of international workers in the field to exchange ideas The purpose of the Congress was to facilitate such an exchange among scientists representing many fields of endeavor and many countries The 37 manuscripts in this volume presented by the invited speakers during the four and half days of the Congress encompass the field of DNA damage and repair They cover biological systems ranging from molecules to humans and deal with damages and repair after treatment of cells with various types of radiations chemicals and exogenous and endogenous oxidative damages The Congress and its Proceedings are dedicated to two international leaders in the field of DNA damage and repair Alexander Hollaender of the United States and Adriano Buzzati Traverso of Italy Hollaender who died in

December 1986 was one of the first investigators to recognize the damage to DNA was important in cell killing and mutagenesis His early work indicated that cells could recover from radiation injury *Multiple Drug Resistance in Cancer*
Martin Clynes, 2012-12-06 This book is an up to date review of current knowledge in the field of multiple drug resistance in human cancer The literature up to the middle of 1993 is surveyed in specialist chapters written by different experts Topics covered include the molecular genetics cytogenetics and biochemistry of the mdr genes and P glycoprotein alternative transport proteins in MDR topoisomerases I and II cytochrome p450 enzymes and glutathione S transferases in MDR cellular models for MDR in solid tumours and haemopoietic tumours immunochemical and molecular biological techniques for detection of MDR related gene expression and clinical and pharmacological strategies to circumvent resistance The book brings together a new combination of approaches to this serious clinical problem
