Jones, 2012-12-06 Over the past two decades auroral science has developed from a somewhat mysterious and imprecise specialty into a discipline central in the study of the ionosphere and magnetosphere The investigation of aurora unites scientists with very different backgrounds and interests so that it is difficult to write a self contained account of the field in a book of reasonable length In this work I have attempted to include those aspects of theory which I have found valuable in predicting the effects on the atmosphere of auroral particle precipitation In addition I have attempted to describe the techniques of observation with particular emphasis on optical methods which have been useful While the aeronomy of aurora has been regarded as central the mechanisms by which particles are accelerated and precipitated into the atmosphere is of no less interest This aspect of the subject has however been treated in a briefer fashion since it is a part of the immense and rapidly developing field of magnetospheric science Generally I have attempted to provide a coherent introduction to auroral science with an emphasis on relatively simple physical interpretations and models References are given to enable the reader to find more extensive or rigorous discussions of particular topics A fairly complete quantitative atlas of the auroral spectrum is included *Carl Størmer* Alv Egeland, William J. Burke, 2012-10-20 This biography summarizes the seminal contributions to auroral and space science of Carl Størmer 1874 1957 He was the first to develop precise photographic methods to calculate heights and morphologies of diverse auroral forms during four solar cycles Størmer independently devised numerical techniques to determine the trajectories of high energy charged particles allowed and forbidden in the Earth's magnetic field His theoretical analyses explained cosmic ray access to the upper atmosphere 20 years before they were identified by other scientists Størmer's crowning achievement The Polar Aurora published when he was 81 years old stands to this day as a regularly cited guide in graduate level courses on space physics The authors present the life of this prodigious scientist in relation to the cultural life of early 20th century in Norway and to the development of the space sciences in the post Sputnik era *Proceedings of the Institute of Radio Engineers* Institute of Radio Engineers, 1929 The ARRL
