Traffic Control Systems Handbook, 1976 This handbook which was developed in recognition of the need for the compilation and dissemination of information on advanced traffic control systems presents the basic principles for the planning design and implementation of such systems for urban streets and freeways The presentation concept and organization of this handbook is developed from the viewpoint of systems engineering Traffic control studies are described and traffic control and surveillance concepts are reviewed Hardware components are outlined and computer concepts and communication concepts are stated Local and central controllers are described as well as display television and driver information systems Available systems technology and candidate system definition evaluation and implementation are also covered The management of traffic control systems is discussed *A Consolidated Model for UHF/SHF Telecommunication Links Between Earth and Synchronous Satellites* Harold T.
