significant progress in the development and understanding of the principles and applications of interstitial alloys Interstitial alloy refers to the existence of a pure metal lattice which the metal metal atom bond remains the dominant one and the non metal atoms are sufficiently small to be accommodated within the metal lattice without or with only a limited degree of distortion from metal type symmetry This book contains 10 chapters and begins with a brief introduction to the basic principles of interstitial alloys The next two chapters describe the physical properties of these alloys along with their behavior in solid solutions The remaining chapters deal with a specific interstitial alloy its structure physico chemical properties preparation and application This work specifically considers carbide nitride boride silicide oxide hydride and mixed interstitial alloys This book will be of value to chemists and physicists

High-resolution Autoradiography George C. Towe, 1954 Autoradiography has been used only to a rather limited extent in metallurgical studies Probably the major deterring factor has been that the autoradiographic systems have not provided the high resolution required in many investigations A general discussion of the requirements for high resolution autoradiography is presented in this report including detecting layer as well as radioactive sample specifications The need for a thin photographic emulsion in close contact with the metal surface is emphasized The desirability of using favorable radiation e g low energy beta radioactivity is also discussed
