Williams, 2012-12-06 Australia is the world's driest inhabited continent Water is our limiting resource It might therefore be thought that our water resources would be the subject of the most intensive study Certain aspects it must be conceded have received much attention notably the availability of water in terms of actual quantity The size of the surface water and the groundwater resource is well understood and indeed receives about as much study as can reasonably be expected in a country with as sparse a population and level of scientific manpower as ours Although the importance of understanding the water resource in terms of quantity is widely accepted what has not been generally appreciated is that for this resource to be available to human society for all the different uses to which it is put it is not sufficient that there exists within easy reach of the end users a certain total volume of water For that water to fulfil its functions for agriculture industry the home recreation biological conservation it must be in a certain state it must conform to certain chemical physical and biological criteria and what has not been sufficiently appreciated in Australian society is that the condition a water is in depends very much on the ecology of the waterbody in which it resides There are waterbodies in the world for example high altitude glacial lakes which are naturally so pristine that their water could be used for any purpose without treatment [1996 IUCN Red List of Threatened Animals](#) Ulf Gärdenfors, A. Living Waters Nick Romanowski, 2013-10-21 Wetlands are often seen as the ultimate symbol of beauty and tranquillity their clear waters sheltering mysterious animals in a world where change is gentle and slow from dragonflies skimming above their own reflections to the fishes glimpsed briefly below Yet Australian wetlands are among the most varied and changeable habitats found anywhere and the many creatures that live out their lives in and around water are superbly adapted to some of the most unpredictable ecosystems in the world This book follows the diverse common themes and patterns that link inland waters from Tasmania to the tropics It shows how cycles of change the ways that different wetland animals travel through and between wetlands and the interactions of the animals themselves create an ever changing ecological kaleidoscope Drawing on what is known of the biology ecology and even the genetics of many of the most abundant widespread and successful groups of animals the author shows similarities to wetlands in other parts of the world as well as some of the more extreme environments and specialised animals that are unique to this continent Far more than a natural history Living Waters explains the underlying forces that drive ecological change and movement in Australian wetlands from the particular needs and habits of some specialised waterbirds to swarms of dragonflies and damselflies that may flourish for a few months before disappearing for years and fishes found gasping in drying pools far from the nearest permanent water just hours after a desert deluge 2014 Whitley Award Commendation for Aquatic Biology

Papua New Guinea Conservation Needs Assessment, 1993

Discovery of Australia's Fishes Brian Saunders, 2012-05-11 This book traces the discovery of Australia's fishes from the earliest days of taxonomy to the first part of the 20th century It provides a unique insight into the diverse pathways by which Australia's fish were discovered and outlines the history of early maritime explorations in Australia that collected natural history specimens The book covers the life and work of each of the most important discoverers and assesses their accomplishments and the limitations of their work Discovery of Australia's Fishes is distinctive in that a biographic approach is integrated with chronological descriptions of the discovery of the Australian fish fauna Many of northern Australia's fishes are found in parts of the Indian and western Pacific oceans The book covers the work of collectors who travelled outside Australia together with that of the British and European zoologists who received and described their collections The account ceases at 1930 the year the first modern checklist of Australian fishes was published 2012 Whitley Award Commendation for Historical Zoology

Ecology of Australian Freshwater Fishes Keith Walker, Paul Humphries, 2013-04-10 This edited volume reviews our past and present understanding of the ecology of

Australian freshwater fishes It compares patterns and processes in Australia with those on other continents discusses the local relevance of ecological models from the northern hemisphere and considers how best to manage our species and their habitats in the face of current and future threats In view of these challenges the need for redress is urgent The chapters are written by some of our foremost researchers and managers developing themes that underpin our knowledge of the ecology conservation and management of fish and fish habitats For each theme the authors formulate a synthesis of what is known consider the need for new perspectives and identify gaps and opportunities for research monitoring and management The themes have an Australian context but draw upon ideas and principles developed by fish biologists in other parts of the world The science of freshwater fish ecology in Australia has grown rapidly from its roots in natural history and taxonomy This book offers an introduction for students researchers and managers one that the authors hope will carry Australian fish biology and resource management to new levels of understanding
