Real World Construction Scheduling:

Real World Construction Project Scheduling John Buttelerwerth, 2018-11 Real World Construction Project Scheduling is called real world because it was written drawing upon the author's 35 years of experience consulting with contractors to help them meet their construction scheduling needs. He knows how contractors use scheduling, what's important to them, and what is not. This text can be combined with any one of the author's four Real World scheduling software books covering either P6 MS Project, Phoenix or Asta Elecosoft Powerproject softwares for the lab portion of the course available at www.johnwyattpublishing.com to create a complete construction scheduling course. Combined together in a curriculum, students will gain a confident real world knowledge of construction project scheduling. Using real world examples, this text takes the student through a typical project, learning the planning and scheduling concepts necessary to successfully deliver a project on time. At the time of this writing, it is the only scheduling text that fully investigates the use of start to start and finish to finish activity relationship types when teaching students to hand draw precedence network diagrams and to hand calculate the critical path of the schedule, including all starts and finishes, total float, and free float. If the completion of a construction project runs late, it is very often the result of poor planning in the pre design and/or design phase of the project. This text fully explores the proper use of planning and scheduling throughout all phases of the project delivery, including pre design and design through to occupancy and project closeout. Packaged with the text includes drawings for a sample project used throughout the text so the students can experience a real world application of the concepts covered in the text. Real World Construction Scheduling Jim Coombes, 1990 *Phoenix Project Manager Real World Scheduling* John Buttelerwerth (Illustrator), 2015-07-01 Phoenix Real World Scheduling is called real world because the author wrote it drawing upon his 30 years of experience consulting with contractors to help them meet their construction scheduling software needs. He knows how contractors use scheduling software, what's important to them, and what is not. Phoenix Project Manager is considered by many to be the best replacement for SureTrak. This manual has been tested and retested in both the classroom and the company training room. It will guide you through the many features of Phoenix Project Manager and teach you how to use the software the way contractors use it. Other software manuals are often hundreds of pages long, filled with dense text that wastes your time trying to cover every corner and nuance of the software, ultimately leaving readers more confused than before they started. Phoenix Real World Scheduling assumes that the reader has no previous exposure to the software and takes the reader through the process of creating a schedule, covering the same features that a contractor would include on their typical schedule. This includes creating and saving the schedule, covering numerous formatting options to customize the look of the schedule, working with calendars, including 50% and 100% weather calendars, then activity coding the schedule to organize the activities. Different views of the schedule are explored, and from there the schedule is updated, covering all possible update scenarios that may actually occur. The updated schedule is stored using Storepoints and then compared side

by side to the original using Phoenix's very unique Comparisons feature A custom Filter is then created to produce a Six Week Look Ahead schedule With this manual and a few hours of your time you will be ready to effectively use Phoenix Project Manager on a real project

Computer Integrated Construction Project Scheduling John Buttelerwerth, 2005 Written in a style that is meant to be open and inviting to the reader with shorter paragraphs and interesting illustrations this book provides a single source comprehensive examination of construction project scheduling Content begins with introducing concepts of the construction industry to provide the necessary framework and background then fully discusses planning and scheduling topics in detail It offers extensively reviewed coverage on the most current version of SureTrak Software thorough coverage of manual network diagramming and CPM calculations and has built into it a capstone project The book includes an abundance of real world examples of numerous scheduling exercises including 17 pages of full size drawings and schedules that are part of the exercises Additionally the information is presented modularly in such a way that it can be customized to fit any learning situation Covers planning and scheduling including the determination of project activities logic and durations drawing precedence network diagrams and manually calculating CPM schedules creating and updating computer generated schedules and schedule reports Well suited to be used as a guide or reference by construction practitioners such as Project managers Superintendents and Construction managers

Construction Project Scheduling and Control Saleh A. P6 Real World Scheduling is called real world because the author wrote it drawing upon his 30 years of experience consulting with contractors. He knows how contractors use scheduling software, what's important to them and what is not. Tested and retested in the classroom, it will guide you through some of the quirks of P6 as well as teach you how to use the software the way contractors use it. Other software manuals are often hundreds of pages long filled with dense text that wastes your time trying to cover every corner and nuance of the software, ultimately leaving readers more confused than before they started. P6 Real World Scheduling is written for Oracle's Primavera P6 Professional software using a local or multi-user database. It was written using version 15.1 but can be applied to previous and post versions of P6 with little concern. Rest assured that it will help the reader clearly grasp the many, sometimes puzzling, nuances of this enterprise-based software, such as the use of the OBS Organizational Breakdown Structure, the EPS Enterprise Project Structure, the lack of traditional save features, user security profiles, and its uncommon import/export components. P6 Real World Scheduling assumes that the reader has no previous exposure to the software and takes the reader through the process of creating a schedule covering the same features that a contractor would include on their typical schedule. This includes creating and saving the schedule, covering numerous formatting options to customize the look of the schedule, working with calendars including 50% and 100% weather calendars, then activity coding the schedule to organize the activities into various Work Breakdown Structures. Different views of the schedule are explored, and from there the schedule is resource loaded and cost loaded, including a real world analysis of an over-allocation of resources. The schedule is then Baseline'd and updated, covering all possible update scenarios that may actually occur. With this manual and a few hours of your time, you will be ready to effectively use Oracle's Primavera's P6 Professional on a real project.
