Algorithm-Architecture Matching for Signal and Image Processing Guy Gogniat, Dragomir Milojevic, Adam Morawiec, Ahmet Erdogan, 2010-10-20 Advances in signal and image processing together with increasing computing power are bringing mobile technology closer to applications in a variety of domains like automotive, health, telecommunication, multimedia, entertainment, and many others. The development of these leading applications involving a large diversity of

algorithms e.g signal image video 3D communication cryptography is classically divided into three consecutive steps a theoretical study of the algorithms a study of the target architecture and finally the implementation Such a linear design flow is reaching its limits due to intense pressure on design cycle and strict performance constraints The approach called Algorithm Architecture Matching aims to leverage design flows with a simultaneous study of both algorithmic and architectural issues taking into account multiple design constraints as well as algorithm and architecture optimizations that couldn't be achieved otherwise if considered separately Introducing new design methodologies is mandatory when facing the new emerging applications as for example advanced mobile communication or graphics using sub micron manufacturing technologies or 3D Integrated Circuits This diversity forms a driving force for the future evolutions of embedded system designs methodologies The main expectations from system designers point of view are related to methods tools and architectures supporting application complexity and design cycle reduction Advanced optimizations are essential to meet design constraints and to enable a wide acceptance of these new technologies Algorithm Architecture Matching for Signal and Image Processing presents a collection of selected contributions from both industry and academia addressing different aspects of Algorithm Architecture Matching approach ranging from sensors to architectures design The scope of this book reflects the diversity of potential algorithms includingsignal communication image video 3D Graphics implemented onto various architectures from FPGA to multiprocessor systems Several synthesis and resource management techniques leveraging design optimizations are also described and applied to numerous algorithms Algorithm Architecture Matching for Signal and Image Processing should be on each designer's and EDA tool developer's shelf as well as on those with an interest in digital system design optimizations dealing with advanced algorithms
