Real Time Ultrasonography:

Real-time Ultrasound Imaging in the Abdomen M.L. Skolnick, 2012-12-06 Diagnostic ultrasound is changing dramatically because of the development of a variety of high resolution real time scanning instruments. Until recently the standard instrument was the articulated arm contact scanner. Real time scanners were viewed as adjunct instruments for specific and limited purposes. The roles are reversing with real time instruments more frequently accepted as the primary diagnostic tool and the contact scanner becoming the ancillary instrument for use mainly for viewing a large field that cannot be scanned with real time instruments. Two recent editorials stated that real time instruments were used as the sole diagnostic instrument for between 80% Cooperberg 2 and 98% Bartrum and Crow 1 of their abdominal examinations. This book introduces the reader to the field of real time scanning in the abdomen. It presupposes an understanding of basic physical concepts of ultrasound, the appearance of both normal and pathologic conditions as produced by static articulated arm contact scanning and a familiarity with the techniques of contact scanning. It is designed to acquaint the reader with the spectrum of real time instrumentation, provide a basic understanding of the physics of ultrasound as related to these instruments, emphasize the special skills required in the use of this equipment and describe applications of real time scanning for various parts of the abdomen. While numerous illustrations of both normal and pathologic anatomy are shown, the book is an all inclusive study of abdominal pathology as demonstrated by real time imaging. **Real-Time Ultrasonography** Fred Winsberg, Peter L. Cooperberg,

Ultrasonography of the Neck Jean-Noel Bruneton, 2012-12-06 Owing to the anatomic complexity of the neck and the diversity of pathologic entities affecting it, the cervical region has long been of great semiological interest. Physical examination is an easy means of evaluating the size and origin of a solitary cervical mass, yet valid interpretation can prove difficult when the normal morphology of the neck has been altered. Excellent examples are patients with extensive fibrosis or scarring secondary to previous irradiation or surgery. Likewise, physical examination cannot assess the relations of a pathologic process to adjacent structures, e.g. invasion can not be distinguished from simple displacement and it is unsuitable for monitoring therapeutic efficacy such as the response of metastatic nodes to medical management. Between physical examination which remains fundamental and exploratory surgical procedures which are often the only means of obtaining indispensable anatomic proof for diagnosis lie a number of recent imaging techniques including computed tomography and magnetic resonance imaging using surface coils that provide invaluable information for the investigation of cervical pathologies. Real time ultrasonography occupies a privileged position because of its noninvasiveness, rapidity and reliability especially when performed by a specially trained examiner. Current Therapy in Large Animal Theriogenology Robert S. Youngquist, Walter R. Threlfall, 2006-10-10 An essential resource for both students and practitioners, this comprehensive text provides practical up to date information about normal reproduction and reproductive disorders in horses, cattle, small ruminants, swine, llamas and other livestock. Featuring contributions from experts in the field.

each section is devoted to a different large animal species and begins with a review of the clinically relevant aspects of the reproductive anatomy and physiology of both males and females. Key topics include the evaluation of breeding soundness, pregnancy diagnosis, diagnosis and treatment of infertility, abortion, obstetrics, surgery of the reproductive tract, care of neonates, and the latest reproductive technology. Includes coverage of all large animal species. All sections provide a review of clinically pertinent reproductive physiology and anatomy of males and females of each species. Complete coverage of the most current reproductive technology including embryo transfer, estrous synchronization, and artificial insemination. A new section on alternative farming that addresses reproduction in bison, elk, and deer. New to the equine section: stallion management, infertility, and breeding soundness evaluation. New to the bovine section: estrous cycle synchronization, reproductive biotechnology, ultrasonographic determination of fetal gender, heifer development, and diagnosis of abortion. New to the porcine section: artificial insemination, boar stud management, diseases of the postpartum period, and infectious disease control. New to the llama section: infectious disease and nutrition.

Irwin & Rippe's Ultrasonography for Management of the Critically Ill Craig M. Lilly, Paul H. Mayo, Seth Koenig, Richard S. Irwin, 2020-09-02 Enhancing and adding to ultrasonographic text and video content in Irwin Rippe's Intensive Care Medicine Eighth Edition, this easy-to-follow volume provides expert guidance on the optimal use of ultrasound in the critical care environment. Irwin Rippe's Ultrasonography for Management of the Critically Ill covers a wide variety of critical care procedures, explaining how to perform them and how ultrasound can be used to support evaluation and management services to patients with life-threatening illnesses or injuries.

Veterinary Reproductive Ultrasonography Wolfgang Kähn, Dietrich Volkmann, 2004-03-22 A guide to the reproductive problems facing the busy veterinary practitioner in every day practice. The pregnant and non-pregnant uterus, as well as pathologic changes of the reproductive system, are described and explained. The book is superbly illustrated and covers all the important domestic large and small animals: dogs, cats, horses, cows, sheep, goats, and pigs.

Basic And New Aspects Of Gastrointestinal Ultrasonography Svein Odegaard, Odd Helge Gilja, Hans Gregersen, 2005-03-28 This book is an introduction for students and

young doctors at the beginning of their career in diagnostic ultrasonography. It also presents the latest in innovations and techniques in gastrointestinal ultrasonography. The reader will find basic aspects of ultrasonography as well as highly advanced technical and research papers. The first category will be easy to understand for most readers. The second category may require some preparation from the student. All advanced papers represent the frontiers of knowledge. The first few chapters deal with the basic principles of ultrasound and its use in tissue characterization. They are followed by chapters on the use of ultrasound for the characterization of tissue biomechanics and on novel techniques such as 3D ultrasound and hydrosonography. The clinical applications are outlined in the last few chapters of the book.

Manual of Equine Reproduction Steven P. Brinsko, Terry L. Blanchard, Dickson D. Varner, James Schumacher, Charles C. Love, 2010-05-19. Now in full color. **Manual of Equine Reproduction 3rd Edition** provides a comprehensive look at the reproductive management of horses including management of stallions, pregnant mares, and neonatal foals. Expert authors use a concise practical approach in discussing improved therapies and treatments in equine breeding. You will enhance your skills and knowledge with this book's detailed coverage of techniques used in reproductive examination, breeding procedures, pregnancy diagnosis, foaling, and reproductive tract surgery. A clinical emphasis includes a step-by-step format of possible scenarios from conception to breeding management. Practical information includes topics such as breeding with transported, cooled, or frozen semen and caring for the broodmare and newborn foal. The organization of material corresponds to the course of study in veterinary school so you can find topics easily. Chapter objectives and study questions at the beginning of each chapter guide you through the material and provide clear learning goals. Evaluation of Breeding Records chapter covers the importance of breeding records and how to use them to evaluate stallion performance and optimize fertility. References are listed at the end of each chapter for further research and study. Full color photographs and illustrations clearly depict procedures, and all drawings have been redrawn and improved. **NEW Assisted Reproductive Technology** chapter goes beyond embryo transfer. Updated content includes the latest advances in therapies and treatments. New content is added to two chapters: Reproductive Physiology of the Nonpregnant Mare and Manipulation of Estrus in the Mare. Thorough coverage of every aspect of equine reproduction provides a strong foundation for success in veterinary practice, including a discussion of the use of GnRH analog, deslorelin Ovuplant to hasten ovulation, aseptic technique for endometrial biopsy, use of transabdominal ultrasonography, especially in early pregnancy, determination of fetal gender by transrectal ultrasonography, aspiration testicular biopsy using a spring-loaded biopsy instrument, and procedure for surgical embryo transfer.

Endobronchial Ultrasound Armin Ernst, Felix JF Herth, 2009-06-10. Endobronchial ultrasound has received explosive attention amongst pulmonologists, thoracic surgeons, and gastroenterologists, and the procedure is increasingly being performed. Even though the technology has been in use for over 10 years, technical modifications have just recently led to the ability for near ubiquitous use. The editors and contributors have all been active in the field for years.

Lazzaroni, S. Gigli, D. Gabina, 2023-08-28 Livestock production systems will only be sustained in the long term if their products continue to meet the demand of consumers The quality of ruminant carcasses meat and meat products is of predominant importance in a competitive market where consumers tend to have a preconceived idea about the criteria that define meat quality such as flavour tenderness juiciness smell colour and texture The carcass evaluation could be interesting as a precocious classification of the final quality of meat coming from each carcass Today the quality characteristics of the meat must be different according to its utilisation supermarket butcher catering refectory etc and so it is very important to choose very early the final destination of the carcass Obviously the carcass classification must correlate with meat quality characteristics required by final consumer Other important factors that have to be taken into account in order to maintain a demand for ruminant meat are safety and traceability This book reviews the historical and recent developments for carcass evaluation and grading for meat quality assessment in beef and sheep It places special emphasis on new concepts and approaches to define carcass and meat quality and on the use of modern technologies for composition and quality evaluation A range of technologies are presented such as ultrasounds and colour reflectance X ray computerised tomography spectral and thermal imaging image analysis and NIRS The use of phenotypic markers such as the plasma hormones and genetic

markers to predict carcass composition and meat quality are also presented
