Recent Advances In Tropical Neurology:

Recent Advances in Tropical Neurology Frank Clifford Rose, 1995 This volume records recent advances in solving the problem of tropical neurological diseases which continue to plague the developing world Topics covered include public health in developing countries tuberculosis of the nervous system and nutritional deficiency disorders of the nervous system

Recent Advances in Ophthalmology Sir Stewart Duke-Elder, 1929 **Tropical Neurology** U.K. Misra, 2003-01-01

Tropical neurology refers to those diseases of the nervous system which prevail in between the Tropics of Cancer and Capricorn Developments in speed and ease of travel and globalisation of economy have resulted in large scale migration rendering the boundaries of tropical regions less distinct Neuroparasitology and Tropical Neurology Hector H.

Garcia, Herbert B. Tanowitz, Oscar H. Del Brutto, 2013-07-03 Neuroparasitology and Tropical Neurology a new volume in The Handbook of Clinical Neurology provides a comprehensive and contemporary reference on parasitic infections of the human nervous system Parasitic infections are varied and some are resolved by the host's immune system other infections may become established even though unnoticed and some cause severe disease and death In our modern world neuroparasitoses are no longer geographically isolated and these infections now appear worldwide Outside of a very few well understood pathologies most parasitic infections have been neglected in the neurological literature and most neurologists have never diagnosed such an infection This volume details how with the advent of modern neuroimaging techniques improved diagnostic applications of molecular biology more accurate immunodiagnosis and minimally invasive neurosurgery human nervous system parasitoses are now diagnosed and treated with increasing frequency The book is divided into six sections and begins with an introduction to the mechanisms of infection diagnosis and pathology of parasitic diseases Subsequent chapters detail protozoan diseases and a section covering each of the major classes of human infecting helminths nematodes roundworms trematodes flukes and cestodes tapeworms The final section contains chapters on other important areas of tropical clinical medicine including the neurological complications of venomous bites and tropical nutritional deficiencies Neuroparasitology and Tropical Neurology will be of interest to neurologists neurosurgeons and other health professionals encountering patients with parasitic infections A comprehensive reference resource on the diagnosis and treatment of parasitic infections of the human nervous system Focuses on the impact of modern neuroimaging techniques improved diagnostic applications of molecular biology more accurate immunodiagnosis and minimally invasive neurosurgery to diagnose parasitoses International list of contributors including the leading workers in the field **Neurology in Tropics (E-book)** Jagjit Chopra, Indermohan Sawhney, 2015-10-15 Neurology in Tropics E book Neuroparasitology and Tropical Neurology Sandra K. Halonen, Louis M. Weiss, 2013-07-03 *Toxoplasma gondii* an Apicomplexan is a pathogenic protozoan that can infect the central nervous system Infection during pregnancy can result in a congenital infection with severe neurological sequelae In immunocompromised individuals reactivation of latent neurological foci can result in encephalitis

Immunocompetent individuals infected with *T. gondii* are typically asymptomatic and maintain this infection for life. However, recent studies suggest that these asymptomatic infections may have effects on behavior and other physiological processes. *Toxoplasma gondii* infects approximately one third of the world population, making it one of the most successful parasitic organisms. Cats and other felidae serve as the definite host, producing oocysts, an environmentally resistant life cycle stage found in cat feces, which can transmit the infection when ingested orally. A wide variety of warm-blooded animals, including humans, can serve as the intermediate host, in which tissue cysts containing bradyzoites develop. Transmission also occurs due to ingestion of the tissue cysts. There are three predominant clonal lineages termed Types I, II, and III, and an association with higher pathogenicity with the Type I strains in humans has emerged. This chapter presents a review of the biology of this infection, including the life cycle, transmission, epidemiology, parasite strains, and the host immune response. The major clinical outcomes of congenital infection, chorioretinitis and encephalitis, and the possible association of infection with toxoplasmosis and neuropsychiatric disorders such as schizophrenia are reviewed.

Advances in Neurology

J. S. Chopra, K. Jagannathan, I. M. S. Sawhney, 1990. This volume is based on the proceedings of four full-day Main Theme Symposia held during the XIV World Congress on Neurology, 22-27 October 1989, in New Delhi, India. The contributions submitted by internationally renowned scientists review the current state of the art on specific compelling problems encountered daily in neurology. The book is divided into five sections, each of which assumes a different topic as its focal point. The first section deals with Cerebrovascular Disease (CVD) and is devoted to both acute and chronic CVD. CVD was the main theme eight years ago during the XII World Congress of Neurology in Kyoto, and since then many new developments have taken place relating to the diagnosis and management thereof. Among topics discussed are epidemiology, mechanism of cerebral ischaemia, and medical management of acute stroke and areas pertaining to stroke in young, including acute cerebral venous occlusions and arterial strokes. AIDS, the twentieth-century plague, is spreading uninhibited throughout the world and continues to attract the attention of neuroscientists because of its numerous neurological complications.

Emerging Neurological Infections

Christopher Power, Richard T. Johnson, 2005-04-04. Offering a clear and authoritative overview of recent developments in microbiology and neuroscience, this reference describes factors contributing to the emergence and resurgence of neurological infections, studying both new and drug-resistant pathogens as well as long-term prevention and control strategies for these diseases.

Epilepsy in the Tropics

J.M.K. Murthy, 2006-06-01. This book focuses on epidemiology, diagnosis, symptomatology, clinical biology, treatment, economics, and health care. It will be a guidebook for professionals in tropical countries engaged in the care of people with epilepsy.

Protective and Pathological Immune Responses in the CNS B. Dietzschold, J.A. Richt, 2013-11-11. In spite of the protection of the CNS, there are situations where immune responses occur due to different disease processes. While antigen specific cells of the adaptive immune response are not normally functional in the CNS tissue, CNS resident cells respond to infection or insult. One mechanism is through the induction of apoptosis in virus infected neurons which may be protective or pathogenic depending on the extent of cell death.
