Microhardness Of Polymers:

Microhardness of Polymers F. J. Baltá Calleja, S. Fakirov, 2007-10-08 This book deals with the micromechanical characterization of polymer materials. It emphasizes microhardness as a technique capable of detecting a variety of morphological and textural changes in polymers. The authors provide a comprehensive introduction to the microhardness of polymers including descriptions of the various testing methods in materials science and engineering. They also discuss the micromechanical study of glassy polymers and the relevant aspects of microhardness of semicrystalline polymers. Numerous application examples of the microhardness technique for the characterization of polymeric materials help readers develop a solid understanding of the material. These real world examples include the influence of polymer processing, the use in weathering tests, the characterization of modified polymer surfaces and others. This book will be of use to graduate level materials science students as well as research workers in materials science, mechanical engineering and physics departments interested in the microindentation hardness of polymer materials.

Mechanical Properties and Testing of Polymers

G.M. Swallowe, 2013-04-17 This volume represents a continuation of the Polymer Science and Technology series edited by Dr D M Brewis and Professor D Briggs. The theme of the series is the production of a number of stand alone volumes on various areas of polymer science and technology. Each volume contains short articles by a variety of expert contributors outlining a particular topic and these articles are extensively cross referenced. References to related topics included in the volume are indicated by bold text in the articles, the bold text being the title of the relevant article. At the end of each article there is a list of bibliographic references where interested readers can obtain further detailed information on the subject of the article. This volume was produced at the invitation of Derek Brewis who asked me to edit a text which concentrated on the mechanical properties of polymers. There are already many excellent books on the mechanical properties of polymers and a somewhat lesser number of volumes dealing with methods of carrying out mechanical tests on polymers. Some of these books are listed in Appendix 1. In this volume I have attempted to cover basic mechanical properties and test methods as well as the theory of polymer mechanical deformation and hope that the reader will find the approach useful.

Integration of Fundamental Polymer Science and Technology L. A. Kleintjens, 2012-12-06 Integration of Fundamental Polymer Science and Technology is a theme that admits of countless variations It is admirably exemplified by the scientific work of R Koningsveld and C G Vonk in whose honour this meeting was organized The interplay between pure and applied is of course not confined to any particular subdiscipline of chemistry or physics witness the name IUPAC and IUPAP but is perhaps rarely so intimate and inevitable as in the macromolecular area The historical sequence may vary when the first synthetic dye was prepared by Perkin considerable knowledge of the molecular structure was also at hand but polymeric materials both natural and synthetic had achieved a fair practical technology long before their macromolecular character was appreciated or established Such historical records have sometimes led to differences of opinion as to whether the pure or the applied arm should deserve the first place of honour The Harvard physiologist Henderson as quoted in Walter Moore s Physical Chemistry averred that Science owes more to the steam engine than the steam engine owes to Science On the other hand few would dispute the proposition that nuclear power production could scarcely have preceded the laboratory observations of Hahn and Strassmann on uranium fission Whatever history may suggest an effective and continuous working relationship must recognize the essential contributions if not always the completely smooth meshing of both extremes

Fellows and Distinguished Scientists which was held on May 22-24, 2003 at the University of Kaiserslautern, Germany. The contributing authors were invited to incorporate updated knowledge and developments into their individual chapters within a year after the workshop, which finally led to these excellent contributions. The success of this workshop was mainly sponsored by the German Alexander von Humboldt Foundation through a Sofia Kovalevskaja Award Program financed by the Federal Ministry for Education and Research within the Investment in the Future Program of the German Government. In 2001, the Humboldt Foundation launched this new award program in order to offer outstanding young researchers throughout the world an opportunity to establish their own work groups and to develop innovative research concepts virtually in Germany.
