Paediatric And Neonatal Critical Care Transport:

Paediatric and Neonatal Critical Care Transport Peter Barry, Andrew Leslie, 2003-04-18 Sick babies and children are moved between hospitals for many reasons often to receive specialist care and treatment not available locally For the transfer to be safe and effective it is necessary to plan carefully for these occasions and for the doctors and nurses attending the transport to be able to provide intensive care on the move The book provides guidance in both of these major areas The first section Planning for Safe and Effective Transport details issues to be considered by senior staff in setting up or modernising a transport programme General principles and relevant physiology are outlined and vehicles and equipment are discussed in depth The second section Practical Transport Management is concerned with different patient groups and key clinical issues These include the distinctive features of neonatal and paediatric patients and management of airway breathing and circulation Other chapters discuss airborne transport pharmacology trauma and special interventions for transport such as extracorporeal membrane oxygenation and inhaled nitric oxide

Pediatric Critical Care Medicine Derek S. Wheeler, Hector R. Wong, 2007 This new textbook is the definitive evidence based resource for pediatric critical care It is the first ostensibly evidence based pediatric critical care textbook and will prove an invaluable resource for critical care professionals across the globe

Design for Pediatric and Neonatal Critical Care Mardelle McCuskey Shepley, 2014-02-03 Design for Pediatric and Neonatal Critical Care provides an overview of the design and research issues associated with the development of environments for pediatric and neonatal intensive care This is the first and only book dedicated to this topic and was created to support individuals interested in developing and studying critical care environments for children and their families In addition to a detailed analysis of the literature from research and practice the author provides a summary of the historical development of critical care for infants and children and information regarding the role of PICUs and NICUs in the critical care system A discussion of current codes and future trends is also provided Design for Pediatric and Neonatal Critical Care includes essays from prominent voices in the field ranging from inspired young architects and researchers to world renowned healthcare design and research icons Illustrations of work that has been identified as exemplary or representative of recent directions are included which will help those planning new or remodeled projects to identify and examine precedents This book is intended to help designers and researchers enhance healing environments for young patients in critical care settings and provide information in support of the families and staff who provide care for these children and infants

Mechanical Ventilation in Critical Care Transport Susan R. Wilcox, Jason Cohen, Michael Frakes, 2024-10-25 This book focuses on managing mechanical ventilation and its impact on physiology primarily in the transport environment Mechanical ventilation is one of the most common procedures in all critical care including critical care transport Yet the management of ventilation poses significant risks to the patient In the transport environment understanding the nuances of mechanical ventilation and its impact on physiology is extremely important

Respiratory therapists and critical care physicians are essential critical care team members but they may not be available in austere or remote locations and consultation may not always be practical More than ever transport clinicians are responsible for managing ventilators according to evidence based principles The objectives of this text are to Familiarize transport clinicians with common terms in mechanical ventilation Review key principles of pulmonary physiology relevant to both mechanical ventilation and specific to transport Understand the interpretation of blood gases as related to the management of the ventilated patient Discuss the basic principles of selecting ventilator settings Develop strategies for caring for ventilated patients with ARDS asthma COPD trauma and neurologic injury Provide information specific to caring for ventilated neonates and pediatric patients Assess and respond to emergencies during mechanical ventilation The book closes with a chapter of case studies which are used to review the principles taught throughout the rest of the text and a conclusion that neatly sums up the essential points of the book Chapters are enhanced with diagrams tables illustrations and photographs All transport clinicians including experienced nurses paramedics emergency medicine residents physician assistants nurse practitioners and EMS fellows will find this book to be of great use Additionally clinicians who provide emergency care for ventilated patients outside the critical care transport setting including paramedics emergency nurses emergency physicians and hospitalists will find this text valuable

Resuscitation and Stabilization of the Critically Ill Child
Derek S. Wheeler, Hector R. Wong, Thomas P. Shanley, 2008-12-17 The care of the critically ill or injured child begins with timely prompt and aggressive resuscitation and stabilization Ideally stabilization should occur before the onset of organ failure in order to achieve the best possible outcomes In the following pages an international panel of experts provides an in depth discussion of the early recognition resuscitation and stabilization of the critically ill or injured child Once again we would like to dedicate this textbook to our families and to the physicians and nurses who provide steadfast care every day in pediatric intensive care units across the globe Derek S Wheeler Hector R Wong Thomas P Shanley V Preface to Pediatric Critical Care Medicine Basic Science and Clinical Evidence The field of critical care medicine is growing at a tremendous pace and tremendous advances in the understanding of critical illness have been realized in the last decade My family has directly benefited from some of the technological and scientific advances made in the care of critically ill children My son Ryan was born during my third year of medical school By some peculiar happenstance I was nearing completion of a 4 week rotation in the newborn intensive care unit NICU The head of the pediatrics clerkship was kind enough to let me have a few days off around the time of the delivery my wife Cathy was 2 weeks past her due date and had been scheduled for elective induction

Medical evacuation in emergencies World Health Organization, 2025-07-04 In times of crisis whether due to disasters armed conflicts or other health emergencies the timely and well coordinated evacuation of patients is a critical component of emergency response Past emergencies have demonstrated the urgent need for standardized approaches to both pre hospital support for medical evacuation medevac and medevac operations themselves The absence of clear protocols coupled with

delays miscommunication and inadequate care during transit can severely impact patient outcomes Establishing standardized procedures ensures that medical evacuations are conducted safely efficiently and in coordination with the broader health care and emergency response system This guidance aims to provide a comprehensive framework for the safe and context adapted coordination clinical care operations support and logistics relevant to governments national authorities including ministries of health civil protection and civil defence national and international Emergency Medical Teams EMTs nongovernmental organizations NGOs Emergency Medical Services EMS and other key stakeholders operating in the medevac space or wishing to build this kind of capacity It defines minimum standards and recommendations for the development and classification of respective specialized care teams SCTs This is particularly relevant for contexts without pre existing or functional prehospital or medevac systems and can support country level capacity building regional and sub regional planning and the development of SCTs
