Paleobotany Paleoeecology And Evolution Vol 2:

Paleopalynology Alfred Traverse, 2007-05-21 *Paleopalynology* second edition provides profusely illustrated treatment of fossil palynomorphs including spores pollen dinoflagellate cysts acritarchs chitinozoans scolecodonts and various microscopic fungal and algal dispersal bodies The book serves both as a student text and general reference work Palynomorphs yield information about age geological and biological environment climate during deposition and other significant factors about the enclosing rocks Extant spores and pollen are treated first preparing the student for more difficult work with fossil sporomorphs and other kinds of palynomorphs Recognizing that palynomorphs occur together in rocks because of chemical robustness and stratigraphic distribution not biological relationship the central sections are organized stratigraphically Among many other topics presented are the sedimentation and geothermal alteration of palynomorphs and palynofacies analysis An appendix describes laboratory methods The glossary bibliographies and index are useful tools for study of the literature

Controls on the Distribution and Quality of Cretaceous Coals Peter J. McCabe, Judith Totman Parrish, 1992-01-01 *Fundamentals of Palaeobotany* Sergei Meyen, 2012-12-06 There have been at least ten English language textbooks of palaeobotany since D H Scott published the first edition of *Studies in Fossil Botany* in 1900 Most have been written by scientists who were primarily botanists by training and were aimed largely at a readership familiar with living plants They tended to follow a general pattern of an introductory chapter on preservation of plants as fossils followed by a systematic treatment group by group Only Seward in his *Plant Life Through the Ages* departed from this pattern in presenting a chronological sequence In the present book Meyen breaks with this tradition Although having a basically biological approach he reaches out into all aspects of the history of plant life and the wider implication of its study Only half of the present work deals sequentially with fossil plant groups treated systematically The remainder then explores those topics which most other textbooks have incidentally or generally either ignored or have only mentioned rather problems of naming and classifying fragmentary plant fossils their ecology biogeography and palaeoclimatic significance and the contribution that they have made to the understanding of living plant morphology and of the process of evolution

Terrestrial Ecosystems Through Time Anna K. Behrensmeyer, 1992-08-15 Breathtaking in scope this is the first survey of the entire ecological history of life on land from the earliest traces of terrestrial organisms over 400 million years ago to the beginning of human agriculture By providing myriad insights into the unique ecological information contained in the fossil record it establishes a new and ambitious basis for the study of evolutionary paleoecology of land ecosystems A joint undertaking of the Evolution of Terrestrial Ecosystems Consortium at the National Museum of Natural History Smithsonian Institution and twenty six additional researchers this book begins with four chapters that lay out the theoretical background and methodology of the science of evolutionary paleoecology Included are a comprehensive review of the taphonomy and paleoenvironmental settings of fossil deposits as well as guidelines for developing ecological characterizations of extinct

organisms and the communities in which they lived The remaining three chapters treat the history of terrestrial ecosystems through geological time emphasizing how ecological interactions have changed the rate and tempo of ecosystem change the role of exogenous forcing factors in generating ecological change and the effect of ecological factors on the evolution of biological diversity The six principal authors of this volume are all associated with the Evolution of Terrestrial Ecosystems program at the National Museum of Natural History Smithsonian Institution

Biogeography and Plate Tectonics J.C. Briggs, 1987-08-01 One needs to look at only a small portion of the enormous literature on plate tectonics published in the last 15 years to realize that there are many differences between the various reconstructions that have been presented It becomes obvious that although there is a general agreement about the presence of an assembly of continents a Pangaea in the early Mesozoic there is considerable disagreement among earth scientists as to the configuration of the assembly and the manner and timing of the subsequent dispersal While the revolution in geophysics was taking place systematic work in paleontology and neontology was being carried out This book is an attempt to incorporate the biological evidence into the theory of plate tectonics The author traces the changing relationships among the various biogeographic regions and demonstrates how such changes may often be correlated with the gradual geographic alteration of the earth's surface He analyses recent information about the distribution of widespread groups of terrestrial and freshwater vertebrates invertebrates and plants and discusses the biogeographical effects of the movement of oceanic plates It is particularly important to obtain dependable information about certain critical times in the history of continental relationships We need to know when the terrestrial parts of the earth were broken apart and when they were joined together The present investigation makes it clear that we cannot depend entirely on evidence from plate tectonics nor will purely biological evidence suffice This book thus provides much of interest to systematists working on contemporary groups of plants and animals paleontologists evolutionary biologists and professors teaching courses in biogeography

Creatures of the Dark L. Alterman, Gerald A. Doyle, M.K. Izard, 2013-03-09 The papers in this volume are representative of those presented at a conference entitled *Creatures of the Dark: The Nocturnal Prosimians* held at Duke University June 9-12 1993 The purpose of the conference attended by more than 100 scientists was to assemble for the first time ever scholars from diverse fields with a common interest in the nocturnal prosimian primates The history of the precursors of this meeting are outlined in the *Historical Perspective* by Doyle this volume Most of the invited papers are presented here in modified form as are several papers originally presented as posters Two papers are included that were not presented due to scheduling conflicts and health considerations Some papers delivered from the podium are not included in this volume Interactions among conference participants resulted in many revisions to the contributions as did the comments of reviewers and the editors Several papers which contained new data or new interpretations of familiar phenomena met with constructive criticism resulting in modification of the original papers We thank all of the contributors for their patience and cooperation and commend the

numerous reviewers who generously donated their time and expertise We greatly appreciate funding from the National Institutes of Health the Wenner Gren Foundation for Anthropological Research the Duke University Center for International Studies the Duke University Primate Center and Drs Charles Putman of Duke University and Malcolm Gillis currently of Rice University

Foundations of Macroecology Felisa A. Smith, John L. Gittleman, James H. Brown, 2014-08-22 Macroecology is an approach to science that emphasizes the description and explanation of patterns and processes at large spatial and temporal scales Some scientists liken it to seeing the forest through the trees giving the proverbial phrase an ecological twist The term itself was first introduced to the modern literature by James H Brown and Brian A Maurer in a 1989 paper and it is Brown's classic 1995 study Macroecology that is credited with inspiring the broad scale subfield of ecology But as with all subfields many modern day elements of macroecology are implicit in earlier works dating back decades even centuries Foundations of Macroecology charts the evolutionary trajectory of these concepts from the species area relationship and the latitudinal gradient of species richness to the relationship between body size and metabolic rate through forty six landmark papers originally published between 1920 and 1998 Divided into two parts Macroecology before Macroecology and Dimensions of Macroecology the collection also takes the long view with each paper accompanied by an original commentary from a contemporary expert in the field that places it in a broader context and explains its foundational role Providing a solid coherent assessment of the history current state and potential future of the field Foundations of Macroecology will be an essential text for students and teachers of ecology alike

Publications of the Geological Survey Geological Survey (U.S.), Geological Survey (U.S.), 1982 [Plant Geography of Chile](#) Andres Moreira-Munoz, 2011-01-19 The first and so far only Plant Geography of Chile was written about 100 years ago since when

many things have changed plants have been renamed and reclassified taxonomy and systematics have experienced deep changes as have biology geography and biogeography The time is therefore ripe for a new look at Chile s plants and their distribution Focusing on three key issues botany systematics geography and biogeographical analysis this book presents a thoroughly updated synthesis both of Chilean plant geography and of the different approaches to studying it Because of its range from the neotropics to the temperate sub Antarctic Chile s flora provides a critical insight into evolutionary patterns particularly in relation to the distribution along the latitudinal profiles and the global geographical relationships of the country s genera The consequences of these relations for the evolution of the Chilean Flora are discussed This book will provide a valuable resource for both graduate students and researchers in botany plant taxonomy and systematics biogeography evolutionary biology and plant conservation
