Gene Expression Systems in Fungi: Advancements and Applications Monika Schmoll, Christoph

Dattenböck, 2016-04-04 Biotechnology has emerged as one of the key environmentally safe technologies for the future which enables use of biomass to develop novel smart materials and to replace oil derived products Fungi are the most efficient producers of the enzymes needed for this purpose and in addition they produce a plethora of secondary metabolites among which novel antibiotics can be found Industrial application and exploitation of the metabolic capacities of fungi requires highly productive and robust gene expression systems which can be achieved by selection of appropriate species and strain

improvement In this book we aim to summarize homologous and heterologous gene expression systems of fungi for production of enzymes and secondary metabolites A broad overview on requirements challenges and successful applications shall serve as a basis for further development of fungi as biotechnological workhorses in research and industry MiRNAs in Aging and Cancer ,2017-08-22 MiRNAs in Aging and Cancer Volume 334 the latest in the International Review of Cell and Molecular Biology series reviews and details current advances in cell and molecular biology This new release includes chapters on a variety of timely topics including the Regulation of autophagy by miRNAs the Impact of miRNAs in cellular senescence miRNAs in hematopoiesis stem cell biology and hematological disorders the Impact of miRNAs on longevity miRNA deregulation in cardiovascular aging and associated disorders miRNA deregulation in aging associated pathologies of the skeletal muscle and miRNAs and neurodegeneration The IRCMB series has a worldwide readership maintaining a high standard by publishing invited articles on important and timely topics that are authored by prominent cell and molecular biologists The articles published in IRCMB have a high impact and an average cited half life of 9 years This great resource ranks high amongst scientific journals dealing with cell biology Publishes only invited review articles on selected topics Authored by established and active cell and molecular biologists Offers a wide range of perspectives on specific subjects

The State of Food and Agriculture 2024 FAO,2024-11-08 Uncovering the true cost of food is the first step in making agrifood systems more inclusive resilient and sustainable As The State of Food and Agriculture 2023 revealed agrifood systems activities generate significant benefits for society but also have negative impacts on economic social and environmental sustainability The quantified hidden costs of agrifood systems amount to around 10 percent of global gross domestic product Therefore strategic action is necessary and all agrifood systems actors from producers and agribusinesses to consumers and governments have a crucial role to play While transforming agrifood systems would yield a net global gain the benefits and costs would be unevenly distributed among stakeholders and countries over time The State of Food and Agriculture 2024 builds on the findings of the 2023 edition delving deeper into the use of true cost accounting assessments of agrifood systems and identifying policy interventions aimed at transformation Using updated global datasets the report confirms previous estimates of the quantified hidden costs of agrifood systems and provides a detailed breakdown of the hidden costs associated with unhealthy dietary patterns and non communicable diseases for 156 countries These findings are analysed through the lens of six agrifood systems categories to take into account various outcomes and hidden costs that require different policy interventions Case studies offering in depth assessments of country local and value chain contexts illustrate the economic social and environmental impacts of current practices to guide policy interventions Crucial to all contexts is the need for inclusive stakeholder consultations to inform interventions and reconcile power imbalances and trade offs
