Local Pattern Detection Katharina Morik,Jean-Francois Boulicaut,Arno Siebes,2005-07-11 Introduction The dramatic increase in available computer storage capacity over the last 10 years has led to the creation of very large databases of scientific and commercial information The need to analyze these masses of data has led to the evolution of the new field of knowledge discovery in databases KDD at the intersection of machine learning statistics and database technology Being interdisciplinary by nature the field offers the opportunity to combine the expertise of different fields into a common objective Moreover within each field diverse methods have been developed and justified with respect to different quality criteria We have to investigate how these methods can contribute to solving the problem of KDD Traditionally KDD was seeking to find global models

for the data that plain most of the instances of the database and describe the general structure of the data Examples are statistical time series models cluster models logic programs with high coverage or classification models like decision trees or linear decision functions In practice though the use of these models often is very limited because global models tend to find only the obvious patterns in the data which domain experts already are aware of What is really of interest to the users are the local patterns that deviate from the already known background knowledge David Hand who organized a workshop in 2002 proposed the new field of local patterns *Discovery Science* Gunter Grieser, Yuzuru Tanaka, 2003-10-07 This book constitutes the refereed proceedings of the 6th International Conference on Discovery Science DS 2003 held in Sapporo Japan in October 2003 The 18 revised full papers and 29 revised short papers presented together with 3 invited papers and abstracts of 2 invited talks were carefully reviewed and selected from 80 submissions The papers address all current issues in discovery science including substructure discovery Web navigation patterns discovery graph based induction time series data analysis rough sets genetic algorithms clustering genome analysis chaining patterns association rule mining classification content based filtering bioinformatics case based reasoning text mining Web data analysis and more
