Underwood,1998-07-16 The distinguished contributors to this volume have been set the problem of describing how we know where to move our eyes There is a great deal of current interest in the use of eye movement recordings to investigate various mental processes The common theme is that variations in eye movements indicate variations in the processing of what is being perceived whether in reading driving or scene perception However a number of problems of interpretation are now emerging and this edited volume sets out to address these problems The book investigates controversies concerning the variations in eye movements associated with reading ability concerning the extent to which text is used by the guidance mechanism while reading concerning the relationship between eye movements and the control of other body movements the relationship between what is inspected and what is perceived and concerning the role of visual control attention in the acquisition of complex perceptual motor skills in addition to the nature of the guidance mechanism itself The origins of the volume are in discussions held at a meeting of the European Society for Cognitive Psychology ESCOP that was held in Wurzburg in September 1996 The discussions concerned the landing effect in reading an effect that if substantiated would provide evidence of the use of parafoveal information in eye guidance and these discussions were explored in more detail at a small meeting in Chamonix in February 1997 Many of the contributors to this volume were present at the meeting but the arguments were not resolved in Chamonix either Other leaders in the field were invited to contribute to the discussion and this volume is the product The argument remains unresolved but the problem is certainly clearer **Secret History** Craig

Typewriting W. E. Cooper,2012-12-06 This volume marks the 75th anniversary of the publication of William Book s 1908 The Psychology of Skill in which typewriting received its first large scale treatment from a psychological standpoint As Book realized early on this form of human behavior is particularly well suited to testing psychological theories of complex motor skill and its acquisition present ing as it does a task that richly engages cognitive and motor components of programming yet involves a form of response output that can be readily quantified Now that typewriting is practiced so widely in workday circumstances studying this activity offers the additional prospect of practical applicability Until recently relatively few studies had been conducted on the psychology of typewriting One might speculate that this dearth of interest stemmed in part from the fact that researchers themselves rarely undertook the activity delegating it instead to the secretarial pool Psychological research on piano playing has produced a literature more sizable than the one on typewriting yet the latter activity has probably been practiced for many more total human hours in this century But contemporary developments in word processing technology have moved the typewriter into the researcher s office and in recent years interest in accompanying psychological issues has grown **Contemporary Perspectives on Reading and Spelling** Clare

Wood,Vincent Connelly,2009-09-10 With contributions from leading international researchers Contemporary Perspectives on Reading and Spelling offers a critique of current thinking on the research literature into reading reading comprehension and

writing Each paper in this volume provides an account of empirical research that challenges aspects of accepted models and widely accepted theories about reading and spelling This book develops the argument for a need to incorporate less widely cited research into popular accounts of written language development and disability challenging the idea that the development of a universal theory of written language development is attainable The arguments within the book are explored in three parts overarching debates in reading and spelling reading and spelling across languages written language difficulties and approaches to teaching Opening up the existing debates and incorporating psychological theory and the politics surrounding the teaching and learning of reading and spelling this edited collection offers some challenging points for reflection about how the discipline of psychology as a whole approaches the study of written language skills Highlighting ground breaking new perspectives this book forms essential reading for all researchers and practitioners with a focus on the development of reading and spelling skills *Basic Processes in Reading* David LaBerge,S. Jay Samuels,2017-03-27

Originally published in 1977 this volume contains the most recent theoretical views and experimental findings by prominent psychologists at the time working in areas they considered to be most basic to the reading processes The material will still be of value to people interested in applied and basic aspects of reading as well as those concerned with language processing and information processing in general The volume divides conveniently into two areas perception and comprehension The initial chapters deal with the perceptual processes involved in reading The second half of the volume delves into the area of comprehension The interested reader will find a wide variety of topics covered in the volume that reflect the amazingly wide range of cognitive functions that are part of the reading process **A Cognitive Neuropsychological Approach to**

Assessment and Intervention in Aphasia Anne Whitworth,Janet Webster,David Howard,2014-01-03 This is a second edition of the highly popular volume used by clinicians and students in the assessment and intervention of aphasia It provides both a theoretical and practical reference to cognitive neuropsychological approaches for speech language pathologists and therapists working with people with aphasia Having evolved from the activity of a group of clinicians working with aphasia it interprets the theoretical literature as it relates to aphasia identifying available assessments and published intervention studies and draws together a complex literature for the practicing clinician The opening section of the book outlines the cognitive neuropsychological approach and explains how it can be applied to assessment and interpretation of language processing impairments Part 2 describes the deficits which can arise from impairments at different stages of language processing and also provides an accessible guide to the use of assessment tools in identifying underlying impairments The final part of the book provides systematic summaries of therapies reported in the literature followed by a comprehensive synopsis of the current themes and issues confronting clinicians when drawing on cognitive neuropsychological theory in planning and evaluating intervention This new edition has been updated and expanded to include the assessment and treatment of verbs as well as nouns presenting recently published assessments and intervention studies It also includes a

The Janus-Face of Language: Where Are the Emotions in Words and the Words in Emotions? Cornelia Herbert, Thomas Ethofer, Andreas J. Fallgatter, Peter Walla, Georg Northoff, 2018-09-28 Language has long been considered independent from emotions In the last few years however research has accumulated empirical evidence against this theoretical belief of a purely cognitive based foundation of language In particular through research on emotional word processing it has been shown that processing of emotional words activates emotional brain structures elicits emotional facial expressions and modulates action tendencies of approach and avoidance probably in a similar manner as processing of non verbal emotional stimuli does In addition it has been shown that emotional content is already processed in the visual cortex in a facilitated manner which suggests that processing of emotional language content is able to circumvent in depth semantic analysis Yet this is only one side of the coin Very recent research putting words into context suggests that language may also construe emotions and that by studying word processing one can provide a window to one's own feelings All in all the empirical observations support the thesis of a close relationship between language and emotions at the level of word meaning as a specific evolutionary achievement of the human species As such this relationship seems to be different from the one between emotions and speech where emotional meaning is conveyed by nonverbal features of the voice But what does this relationship between written words and emotions theoretically imply for the processing of emotional information The present Research Topic and its related articles aim to provide answers to this question This book comprises several experimental studies investigating the brain structures and the time course of emotional word processing Included are studies examining the affective core dimensions underlying affective word processing and studies that show how these basic affective dimensions influence word processing in general as well as the interaction between words feelings and expressive behavior In addition new impetus comes from studies that on the one hand investigate how task sublexical and intrapersonal factors influence emotional word processing and on the other hand extend emotional word processing to the domains of social context and self related processing Finally future perspectives are outlined including research on emotion and language acquisition culture and multilingualism In summary this textbook offers scientists from different disciplines insight into the neurophysiological behavioral and subjective mechanisms underlying emotion and language interactions It gives new impulses to existing theories on the embodiment of language and emotion

and provides new ways of looking at emotion cognition interactions

The Handbook of East Asian Psycholinguistics:

Volume 1, Chinese Ping Li, Li Hai Tan, Elizabeth Bates, Ovid J. L. Tzeng, 2006-04-27 A large body of knowledge has accumulated on the cognitive processes and brain mechanisms underlying language. Much of this knowledge has come from studies of Indo-European languages; in particular, English. Chinese, spoken by one fifth of the world's population, differs significantly from most Indo-European languages in its grammar, its lexicon, and its written and spoken forms, features which have profound implications for the learning, representation, and processing of language. This handbook, first published in 2006 as the first in a three-volume set on East Asian psycholinguistics, presents a discussion of the psycholinguistic study of Chinese. With contributions by over fifty leading scholars, it covers topics in first and second language acquisition, language processing, and reading; language disorders in children and adults; and the relationships between language, brain, culture, and cognition. It will be invaluable to all scholars and students interested in the Chinese language as well as cognitive psychologists, linguists, and neuroscientists.

Current Oculomotor Research Wolfgang Becker, Heiner Deubel, Thomas Mergner, 2013-11-09 This volume contains the proceedings of the Ninth European Conference on Eye Movements (ECEM 9) held in Ulm, Germany, on September 23-26, 1997. ECEM 9 continued a series of conferences initiated by Rudolf Groner of Bern, Switzerland, in 1981, which from its very beginning has brought together scientists from very diverse fields with a common interest in eye movements. About 40 of the papers presented at ECEM 9 have been selected for presentation in full length, while others are rendered in condensed form. There is a broad spectrum of motives why people have become involved in and fascinated by eye movement research. Neuroscientists have been allured by the prospect of understanding anatomical findings, single-unit recordings, and the sequels of experimental lesions in terms of the clearly defined system requirements and the well-documented behavioural repertoire of the oculomotor system. Others have been attracted by the richness of this repertoire and its dependence on an intricate hierarchy of factors spanning from simple reflexes to visual pattern recognition and spatio-temporal prediction. Neurologists, neuro-ophthalmologists, and neuro-otologists have long-standing experience with eye movements as sensitive indicators of lesions in the brain stem, the midbrain, and the cerebellum. By studying oculomotor malfunctions, they have made and are continuing to make important contributions to our understanding of oculomotor functions.
