and Processes of Speciation in Ancient Lakes Thomas Wilke, Risto Väinölä, Frank Riedel, 2009-04-02 Ancient lakes are exceptional freshwater environments that have continued to exist for hundreds of thousands of years They have long been recognized as centres of biodiversity and hotspots of evolution During recent decades speciation in ancient lakes has emerged as an important and exciting topic in evolutionary biology The contributions in this volume deal with patterns and processes of biological diversification in three prominent ancient lake systems Of these the famous East African Great Lakes already have a strong tradition of evolutionary studies but the two other systems have so far received much less attention The exceptional biodiversity of the European sister lakes Ohrid and Prespa of the Balkans has long been known but has largely been neglected in the international literature until recently The rich biota and problems of its evolution in the two central lake systems on the Indonesian island of Sulawesi in turn have only lately started to draw scientific attention This volume aims at deepening the awareness of the unusual biological diversity in ancient lakes in general and of the role of these lakes as natural laboratories for the study of speciation and diversification in particular It should stimulate further research that will lead to a better understanding of key evolutionary processes in these lakes and to knowledge that might help in mitigating the deterioration of their diversity in the future

Fruit Flies (Tephritidae) Martin Aluja, Allen Norrbom, 1999-12-20 Fruit flies Diptera Tephritidae are among the most destructive agricultural pests in the world eating their way through acres and acres of citrus and other fruits at an alarming rate and forcing food and agriculture agencies to spend millions of dollars in control and management measures But until now the study of fruit flies has been traditi

Wildlife Ecology and Management in Mexico Raul Valdez, José Alfonso Ortega-Santos, 2019-01-23 Mexico is the fourteenth largest country in the world and ranks fifth in biodiversity Located in the transition zone between the temperate and tropical regions of North and South America Mexico is an important migratory corridor for wildlife and also provides wintering habitat for several species of bats monarch butterflies and temperate North American nesting birds Mexico faces several challenges to wildlife management and conservation efforts While there is increased public education and acknowledgment of the valuable benefits wildlife provides there is still much work to do to incentivize conservation efforts Fortunately there is growing recognition that Mexico's wildlife resources can be a critical component in the rural economic development of the

country Bringing together an international team of wildlife experts across North America Wildlife Ecology and Management in Mexico provides information on the status distribution ecological relationships and habitat requirements and management of the most important game birds and mammals in Mexico It also reviews current threats and challenges facing wildlife conservation as well as strategies for resolving these issues This reference is a valuable tool for wildlife biologists wildlife management professionals and anyone interested in conserving Mexico s wealth of natural resources By laying out the challenges to conservation research editors Raul Valdez and J Alfonso Ortega S hope to encourage interdisciplinary communication and collaboration across borders *The Biology of the Guinea Pig* Joseph E. Reproduction and Social Context in Sub-Saharan Africa Samuel Agyei-Mensah, John B. Casterline, 2003-06-30 Perhaps no region matches sub Saharan Africa in its social and cultural diversity In this collection of micro demographic studies the authors examine how the diversity of this region influences reproductive behavior The empirical studies distributed throughout the continent are localized in depth studies that give special attention to contextual effects of social structure and social organization A diverse range of topics is addressed including adolescent sexuality and the effects of early childbearing on later fertility the impact of development programs on fertility and the association between social organization social diffusion and reproductive regime Highly revealing of the determinants of reproduction in Africa these studies serve as a model for a new mode of demographic research The chapters are arranged by geographical regions of the continent with an introductory chapter outlining the editors vision of a micro demographic enterprise and a concluding chapter placing the African fertility transition in the context of the global fertility transition This volume inspires fresh thinking and theorizing about demographic change not only in sub Saharan Africa but also in all low income settings
