**Measurements and Estimations of Forest Stand Parameters Using Remote Sensing** Donald A. Stellingwerf, Yousif Ali Hussin, 1997-08 Generally speaking the use of remote sensing imagery will reduce field work Remote sensing imagery gives an overall view of the forest in addition to more detailed information the extent of which depends mainly on scale and film used in case of analogue data and mainly on pixel size in case of digital data This book deals with measurements and estimations of forest stand parameters using aerial photographic aircraft and satellite scanning data radar and laser imagery It includes technical and statistical information of practical examples from both temperate and tropical forests Statistical analysis of measurement data and sampling techniques are given when required The obtained results are compared with those from other techniques showing their relative advantage or disadvantage Nez Perce National Forest (N.F.), American and Crooked River Project ,2005 **U.S.D.A. regions of the world and a renewable reservoir of essential raw materials for the wood processing industry In June 1992 the United Nations Conference on the Environment and Development UNCED in Rio de Janeiro initiated a world wide process of negotiation with the aim of ensuring sustainable management conservation and development of forest resources Although there seems to be unanimous support for sustainable development from all quarters there is no generally accepted set of indicators which allows comparisons to be made between a given situation and a desirable one In a recent summary paper prepared by the FAO Forestry and Planning Division Ljungman et al 1999 find that forest resources continue to diminish while being called upon to produce a greater range of goods and services and that calls for sustainable forest management will simply go unheeded if the legal policy and administrative environment do not effectively control undesirable practices Does the concept of sustainable forest management represent not much more than a magic formula for achieving consensus a vague idea which makes it difficult to match action to rhetoric The concept of sustainable forest management is likely to remain an imprecise one but we can contribute to avoiding management practices that are clearly unsustainable
