Productivity Growth in Japan and the United States Charles R. Hulten, 2007-12-01 Emerging from the ruins of the Second World War the Japanese economy has grown at double digit rate throughout much of the 1950s and 1960s and when the oil crisis of the 1970s slowed growth throughout the industrialized world Japanese growth throughout the industrialized world Japanese growth rates remained relatively strong There have been many attempts by scholars from a wide range of disciplines to explain this remarkable history but for economists interested in the quantitative analysis of economic growth and the principal question addressed is how Japan was able to grow so rapidly The contributors focus their efforts on the accurate measurement and comparison of Japanese and U S economic growth Assuming that any sustained increase in real GNP must be due either to an increase in the quantity of capital and labor used in production or to the more efficient use of these inputs the authors analyze the individual contributions of various factors and their importance in the process of output growth These essays extend the methodology of growth analysis and offer many insights into the factors leading to the superior performance of the Japanese economy They demonstrate that growth is a complex process and no single factor can explain the Japanese miracle

Productivity: International comparisons of economic growth Dale Weldeau Jorgenson, 1995 These two volumes present empirical studies that have permanently altered professional debates over investment and productivity as sources of postwar economic growth in industrialized countries The distinctive feature of investment is that returns can be internalized by the investor The most straightforward application of this idea is to investments that create property rights but these volumes broaden the meaning of capital formation to include investments in education and training International Comparisons of Economic Growth focuses on comparisons among industrialized countries Although Germany and Japan are often portrayed as economic adversaries of the U S postwar experiences in all three countries support policies that give high priority to stimulating and rewarding capital formation In the Asian model of growth exemplified by Japan investments in tangible assets and human capital are especially critical during periods of rapid growth
