Knapp,Lynn C. Robertson,2016-07-15 To the vast majority of academic psychologists in the 1980s the study of cognition referred to that area of psychology known as cognitive psychology The major basis of this area had been the computer metaphor with its accompanying notion of the individual as an information processing system Yet within the field the study of cognition is much broader and has a history that reaches into antiquity whereas cognitive psychology as information processing psychology had only recently become the standard bearer of cognitive studies One of the purposes of this volume originally published in 1986 was to articulate some of the fundamental distinctions between and concordances among different orientations concerning the study of cognition The collection includes chapters on information processing ecological Gestalt physiological and operant psychology The Creative Animal Roberto Marchesini,2022-08-03 This book deals with the theme of creativity in the animal world conceived as a basic function for adapting to specific situations and as a source of innovations and inventions Creativity is a fundamental resource for the individual who always has a leading role in conduct To explain creativity the book focuses on the concept of animal subjectivity providing a new explanatory model of behavior capable of overcoming the image of the animal moved by automatisms This model does not use consciousness as a necessary condition but is based 1 on affective components such as behavioral motives and 2 cognitive as tools used by the subject to carry out his purposes Particular attention is paid to the learning processes showing the subjective character of the experience One topic addressed is the role of creativity in the evolution of living beings how an invention by modifying the niche characteristics is able to change the

selective pressures and the trajectory of phylogeny Roberto Marchesini explains that creativity is a factor that is anything but rare or exceptional in the animal world it constitutes a fundamental quality for many aspects of animal life The Psychology Of Teaching (13) Shalini Wadhwa,2005 How and Why People Change Ian M. Evans,2013-01-17 In How and Why People Change Dr Ian M Evans revisits many of the fundamental principles of behavior change in order to deconstruct what it is we try to achieve in psychological therapies All of the conditions that impact people when seeking therapy are brought together in one cohesive framework assumptions of learning motivation approach and avoidance barriers to change personality dynamics and the way that individual behavioral repertoires are inter related **The Sources of Value** Stephen C. Pepper,2023-04-28 This title is part of UC Press s Voices Revived program which commemorates University of California Press s mission to seek out and cultivate the brightest minds and give them voice reach and impact Drawing on a backlist dating to 1893 Voices Revived makes high quality peer reviewed scholarship accessible once again using print on demand technology This title was originally published in 1958 **Animal Learning and Cognition** Nestor A. Schmajuk,1997-04-28 In this advanced text the author starting with the simple assumption that psychological associations are represented by the strength of synaptic connections details several mechanistic descriptions of complex cognitive behaviors Part I presents neural network theories of classical conditioning Part II describes neural networks of operant conditioning and animal communication Part III discusses spatial and cognitive mapping and finally Part IV shows how neural network models permit one to simultaneously develop psychological theories and models of the brain The book includes computer software that allows the computer simulation of classical conditioning and the effect of different brain lesions on many classical paradigms All those people interested in neural networks from psychologists through neuroscientists to computer scientists working on artificial intelligence and robotics will find this book an excellent advanced guide to the subject *Purpose and Cognition* David W. Carroll,2017-04-27 This book discusses the development of Edward Tolman s purposive behaviourism from the 1920s to the 1950s highlighting the tension between his references to cognitive processes and the dominant behaviourist trends It shows how Tolman incorporated concepts from European scholars including Egon Brunswik and the Gestalt psychologists to justify a more purposive form of behaviourism and how the theory evolved in response to the criticisms of his contemporaries The manuscript also discusses Tolman s political activities culminating in his role in the California loyalty oath controversy in the 1950s Tolman was involved in a number of progressive causes during his lifetime activities that drew the attention of both state legislators in California and the Federal Bureau of Investigation It treats Tolman s theoretical and political activities as emanating from the same source a desire to understand the learning process in a scientific manner and to apply these concepts to improve the human condition The Orienting Reflex in Humans H. D. Kimmel,E. H. van Olst,J. F. Orlebeke,2021-09-30 Originally published in 1979 the world s leading researchers contributed chapters describing their work on the orienting reflex in humans The contributions at the time current and comprehensive in a sense that each facet of

contemporary research was represented address the orienting reflex now recognized as a fundamental component of human learning and cognitive function The authors contributing to this volume emphasize both theoretical and methodological issues as well as present more empirical research Here is a volume that spans all current work on the orienting reflex in humans both basic and applied from the laboratory as well as clinical data and which would be of immense interest to psychologists psychophysicists psychiatrists physiologists and all others interested in this fascinating topic
