Holmes, 2012-01-01 Over the last thirty years more and more critics and scholars have come to recognize the significant
influence of science on literature This collection of essays focuses specifically on what poets in the twentieth and twenty first
centuries have made of modern scientific developments In these twelve essays leading experts on modern poetry literature

Australia *The Changing Role of the Embryo in Evolutionary Thought* Ron Amundson, 2005-03-14 In this book Ron
Amundson examines two hundred years of scientific views on the evolution development relationship from the perspective of
evolutionary developmental biology evo devo This perspective challenges several popular views about the history of
evolutionary thought by claiming that many earlier authors had made history come out right for the Evolutionary Synthesis
The book starts with a revised history of nineteenth century evolutionary thought It then investigates how development
became irrelevant with the Evolutionary Synthesis It concludes with an examination of the contrasts that persist between
mainstream evolutionary theory and evo devo This book will appeal to students and professionals in the philosophy and

Christian theology can provide a solid framework for considering these issues

Reconceiving Experience John T. Kearns, 1996-09-12 Kearns investigates representation and intentional activity to determine how experience contributes to propositional thought and belief and how experience is based on neural states and events This speech act theory shows using language to be intentional purposive activity which cannot be explained computationally or causally Learning language makes propositional thinking possible and provides conceptual structure to experience The account of language and its acquisition sheds light on further issues such as reference and proper names the difference between syllogistic and modern logic and the paradoxes of self reference As for experience the nonrelational analysis of representing explains our awareness of the world which doesn't give us access to the world and our access which isn't provided by awareness Reconceiving Experience presents a new framework for understanding language thought and experience and for carrying out research

What is the Human Being? Patrick R. Frierson, 2013-02-11 Philosophers anthropologists and biologists have long puzzled over the question of human nature It is also a question that Kant thought about deeply and returned to in many of his writings In this lucid and wide ranging introduction to Kant's philosophy of human nature which is essential for understanding his thought as a whole Patrick R Frierson assesses Kant's theories and examines his critics He begins by explaining how Kant articulates three ways of addressing the question what is the human being the transcendental the empirical and the pragmatic He then considers some of the great theorists of human nature who wrestle with Kant's views such as Hegel Marx Darwin Nietzsche and Freud contemporary thinkers such as E O Wilson and Daniel Dennett who have sought biological explanations of human nature Thomas Kuhn Michel Foucault and Clifford Geertz who emphasize the diversity of human beings in different times and places and existentialist philosophers such as Sartre and Heidegger He argues that whilst these approaches challenge and enrich Kant's views in significant ways all suffer from serious weaknesses that Kant's anthropology can address Taking a core insight of Kant's that human beings are fundamentally free but finite he argues that it is the existentialists particularly Sartre who are the most direct heirs of his transcendental anthropology The final part of the book is an extremely helpful overview of the work of contemporary philosophers particularly Christine Korsgaard and Jürgen Habermas Patrick R Frierson explains how these philosophers engage with questions of naturalism historicism and existentialism while developing Kantian conceptions of the human being Including chapter summaries and annotated further reading *What is the Human Being* is an outstanding introduction to some fundamental aspects of Kant's thought and a judicious assessment of leading theories of human nature It is essential reading for all students of Kant and the philosophy of human nature as well as those in related disciplines such as anthropology politics and sociology

The Problem of Knowledge Ernst Cassirer, 1950-01-01 Cassirer employs his remarkable gift of lucidity to explain the major ideas and intellectual issues that emerged in the course of nineteenth century scientific and

historical thinking The translators have done an excellent job in reproducing his clarity in English There is no better place for an intelligent reader to find out with a minimum of technical language what was really happening during the great intellectual movement between the age of Newton and our own New York Times Publisher description *God, Science, and Self* Nauman Faizi,2021-08-15 Muhammad Iqbal d 1938 was one of the most influential modernist Islamic thinkers of the early twentieth century His work as a poet politician philosopher and public intellectual was widely recognized in his lifetime and plays a major role in contemporary conversations about Islam modernity and tradition *God Science and Self* examines the patterns of reasoning at work in Iqbal s philosophic magnum opus arguably the most significant text of modernist Islamic philosophy *The Reconstruction of Religious Thought in Islam* Since its initial publication in 1934 *The Reconstruction* has left scholars in a quandary its themes appear eclectic and its arguments contradictory and philosophically perplexing In this groundbreaking study Nauman Faizi argues that the keys to demystifying the contradictions of *The Reconstruction* are two competing epistemologies at play within the work Iqbal takes knowledge to be descriptive essential foundational and binary but he also takes knowledge to be performative contextual probabilistic and vague Faizi demonstrates how these approaches to knowledge shape Iqbal s claims about personhood God scripture philosophy and science *God Science and Self* offers an original approach to interpreting Islamic thought as it crafts relationships between scriptural texts philosophic thought and scientific claims for modern Muslim subjects *A Guide for the Godless* Andrew Kernohan,2008-02

Criticism and Commitment E.J. Echeverria,2022-01-10 **The Rhetorical Turn** Herbert W. Simons,2011-02-15 We have only recently started to challenge the notion that serious inquiry can be free of rhetoric that it can rely exclusively on hard fact and cold logic in support of its claims Increasingly scholars are shifting their attention from methods of proof to the heuristic methods of debate and discussion the art of rhetoric to examine how scholarly discourse is shaped by tropes and figures by the naming and framing of issues and by the need to adapt arguments to ends audiences and circumstances Herbert W Simons and the contributors to this important collection of essays provide impressive evidence that the new movement referred to as the rhetorical turn offers a rigorous way to look within and across the disciplines *The Rhetorical Turn* moves from biology to politics via excursions into the rhetorics of psychoanalysis decision science and conversational analysis Topics explored include how rhetorical invention guides scientific invention how rhetoric assists political judgment and how it integrates varying approaches to meta theory Concluding with four philosophical essays this volume of case studies demonstrates how the inventive and persuasive dimensions of scholarly discourse point the way to forms of argument appropriate to our postmodern age

Evolution "On Purpose" Peter A. Corning,Stuart A. Kauffman,Denis Noble,James A. Shapiro,Richard I. Vane-Wright,2023-08-22 A unique exploration of teleonomy also known as evolved purposiveness as a major influence in evolution by a broad range of specialists in biology and the philosophy of science The evolved purposiveness of living systems termed teleonomy by chronobiologist Colin Pittendrigh has been both a major outcome and causal factor in the history of life

on Earth Many theorists have appreciated this over the years going back to Lamarck and even Darwin in the nineteenth century In the mid twentieth century however the complex dynamic process of evolution was simplified into the one way bottom up single gene centered paradigm widely known as the modern synthesis In *Evolution On Purpose* edited by Peter A Corning Stuart A Kauffman Denis Noble James A Shapiro Richard I Vane Wright and Addy Pross some twenty theorists attempt to modify this reductive approach by exploring in depth the different ways in which living systems have themselves shaped the course of evolution *Evolution On Purpose* puts forward a more inclusive theoretical synthesis that goes far beyond the underlying principles and assumptions of the modern synthesis to accommodate work since the 1950s in molecular genetics developmental biology epigenetic inheritance genomics multilevel selection niche construction physiology behavior biosemiotics chemical reaction theory and other fields In the view of the authors active biological processes are responsible for the direction and the rate of evolution Essays in this collection grapple with topics from the two way read write genome to cognition and decision making in plants to the niche construction activities of many organisms to the self making evolution of humankind As this collection compellingly shows and as bacterial geneticist James Shapiro emphasizes The capacity of living organisms to alter their own heredity is undeniable
