Radiation Curing Science And Technology:

Radiation Curing S. Peter Pappas, 2013-11-11 Striking a balance between the scientific and technological aspects of radiation curing this work includes both a summary of current knowledge as well as many chapters which present the first comprehensive accounts of their subjects

Radiation Curing in Polymer Science and Technology Jean-Pierre Fouassier, Jan F. RABEK, 1993-07-31 Volume Four discusses the applications of radiation curing and provides a synopsis of the latest research in coatings graphic arts microelectronics optical fibres adhesives 3D machining membranes and holographic optical elements as well as considering the worldwide trends in the market

UV Curing Socrates Peter Pappas, 1978

Radiation Curing in Polymer Science and Technology Jean-Pierre Fouassier, Jan F. RABEK, 1993-07-31 Volume three deals specifically with the role of monomers and resins in radiation curing The nature of the backbone of oligomers leads to the ultimate physical or chemical properties of the UV cured material This chapter also covers aspects of the chemistry of these compounds in relation to their end uses

Radiation Curing in Polymer Science and Technology Jean-Pierre Fouassier, 1993

Radiation Curing in Polymer Science and Technology: Fundamentals and methods Jean-Pierre Fouassier, J. F. Rabek, 1993

Radiation Curing in Polymer Science and Technology: Photoinitiating systems Jean-Pierre Fouassier, J. F. Rabek, 1993

Photoinitiated Polymerisation J.P. Fouassier, 1998 This report contains a review of the state of the art in photoinitiated polymerisation The review is divided into two main parts The first part is devoted to a basic description of the different photoinitiation processes encountered In the second part photopolymerisation reactions are presented and discussed This review is published together with an indexed section containing bibliographic references and abstracts to the cited articles

Radiation Curing in Polymer Science and Technology: Practical aspects and applications Jean-Pierre Fouassier, J. F. Rabek, 1993

Radiation Technology for Polymers Jiri George Drobny, 2021-04-15 This practical book sets the standard as a valuable time saving resource offering systematic fundamental information about industrial radiation technologies This new edition explores updates to emerging applications of ultraviolet UV and electron beam EB radiation to polymer processing and offers updates throughout to detail changes changes new trends and general issues in radiation technology It presents vital cutting edge information to aid further reduction of volatile organic compounds and toxic substances in the environment develop alternative sources of energy and harness energy in both medical and industrial applications New features of this edition include Stresses the practical aspects of UV EB technology and its industrial application Includes updates on UV radiation processes and applications of UV radiation Explores new engineering data of selected commercial products Written by an expert with over forty years of experience this book would make an excellent resource for scientists and engineers in the fields of materials science and polymer chemistry

Radiation Curing S. Peter Pappas, 2014-01-15

Radiation Curing Patrick Glöckner, 2009-01-15 This book a combination of theory and practice provides comprehensive knowledge in the field of radiation curing and support for your

daily work It offers guidance on how to select raw materials and features a troubleshooting chapter which provides concrete answers to possible problems This book is aimed towards formulators in the field of radiation curing students and young professionals in coatings and printing inks with no previous experience of radiation curing and all readers who have an interest in and enjoy reading about the theory and practice of one of the fastest growing technologies Book Jacket

Photoinitiators for Polymer Synthesis Jean-Pierre Fouassier, Jacques Lalevée, 2013-01-02 Photoinitiating systems for polymerization reactions are largely encountered in a variety of traditional and high tech sectors such as radiation curing laser imaging micro electronics optics and medicine This book extensively covers radical and nonradical photoinitiating systems and is divided into four parts Basic principles in photopolymerization reactions Radical photoinitiating systems Nonradical photoinitiating systems Reactivity of the photoinitiating system The four parts present the basic concepts of photopolymerization reactions review all of the available photoinitiating systems and deliver a thorough description of the encountered mechanisms A large amount of experimental and theoretical data has been collected herein This book allows the reader to gain a clear understanding by providing a general discussion of the photochemistry and chemistry involved The most recent and exciting developments as well as the promising prospects for new applications are outlined Radiation Curing in Polymer Science and Technology: Polymerisation mechanisms Jean-Pierre Fouassier, J. F. Rabek, 1993 *Radiation Curing in Polymer Science and Technology-Volume II* J. P. Fouassier, J. F. Rabek, 1993-07-15 The demand for photoinitiators has been steadily increasing since benzoin ethers latent radical sources activated by UV light were first industrially employed in particle board finishing in the 1960s Among the factors contributing to the continuing success of photoinitiators are the widespread adoption of dry coatings which eliminate the environmental problems associated with solution polymerisation and the development of new printing and resist applications All of the early commercial photoinitiators were organic compounds primarily derivatives of benzil or acetophenone But as research in organo metallic chemistry gained momentum the potential advantages of organo metallic complexes as photoinitiators became evident Not only would the use of metal based compounds allow polymerisation to be initiated by lower energy and therefore more economical visible light but the absorption characteristics and reactivity of these complexes could be fine tuned to fit the specific application requirements by manipulation of the metal ligands In fact the recent commercialisation of the first two organo metallic photoinitiators a titanocene see p 347 and a cyclopentadienyl arene iron II salt see p 359 bears testimony to the mounting importance and versatility of metal complexes as latent sources of radicals and or Lewis acids The purpose of this chapter is to provide an overview of photopolymerisation with metal species whether they be metal ions inorganic or organo metallic complexes

Radiation Curing in Polymer Science and Technology: Photoinitiating systems Jean-Pierre Fouassier, 1993 The aim of this four volume multi author reference work is to provide a comprehensive guide to the radiation curing field Volume Two is devoted to the chemistry of photoinitiators presenting and discussing basic concepts and the reactivity of typical
